

# Graph Learning Session Incorporating Ontological Information in Knowledge Graph Learning and Applications

Junheng Hao

PhD Candidate, University of California, Los Angeles (UCLA)

# Junheng Hao

Research Intern, MSAI (2020)

PhD Candidate, University of California Los Angeles (2017-)

Advisor: Wei Wang, Yizhou Sun

Website: [Jeff's Home \(haojunheng.com\)](http://haojunheng.com)

## Bio

- Currently final-year Ph.D. candidate at UCLA co-advised by Yizhou Sun and Wei Wang in UCLA Data Mining Group.
- My research interests include knowledge graph, graph representation learning, KG-empowered applications (NLP, Bioinformatics, recommender systems, etc.).
- Before joining UCLA, I graduated in 2017 from Department of Automation, Tsinghua University.

## Past Experiences

- PhD Research Intern, IBM, 2020
- Applied Science Intern, Amazon Product Graph, 2019
- Research Intern, NEC Labs America, 2018

# Today's Agenda

- Background: Knowledge graphs and representation learning
- **JOIE**: Joint learning on instance and ontology view on knowledge graphs
- Two JOIE-inspired applications:  
Bioinformatics (**Bio-JOIE**) and  
Recommender Systems (**P-Companion**)
- Summer intern project at MSAI:  
**DocGraph**

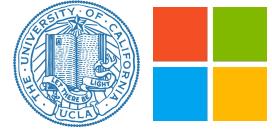

# Papers

- Universal representation learning of knowledge bases by jointly embedding instances and ontological concepts (KDD'19)
- Bio-JOIE: Joint representation learning of biological knowledge bases (ACM BCB'20, Best Student Paper)
- P-Companion: A principled framework for diversified complementary product recommendation (CIKM'20)

# Background: Knowledge Graphs and Representation Learning on KG

Facts from  
KG

# Knowledge graphs (KGs) Are Everywhere

## General-purpose KGs

## Product Graphs & E-commerce

## Bio & Medical KGs

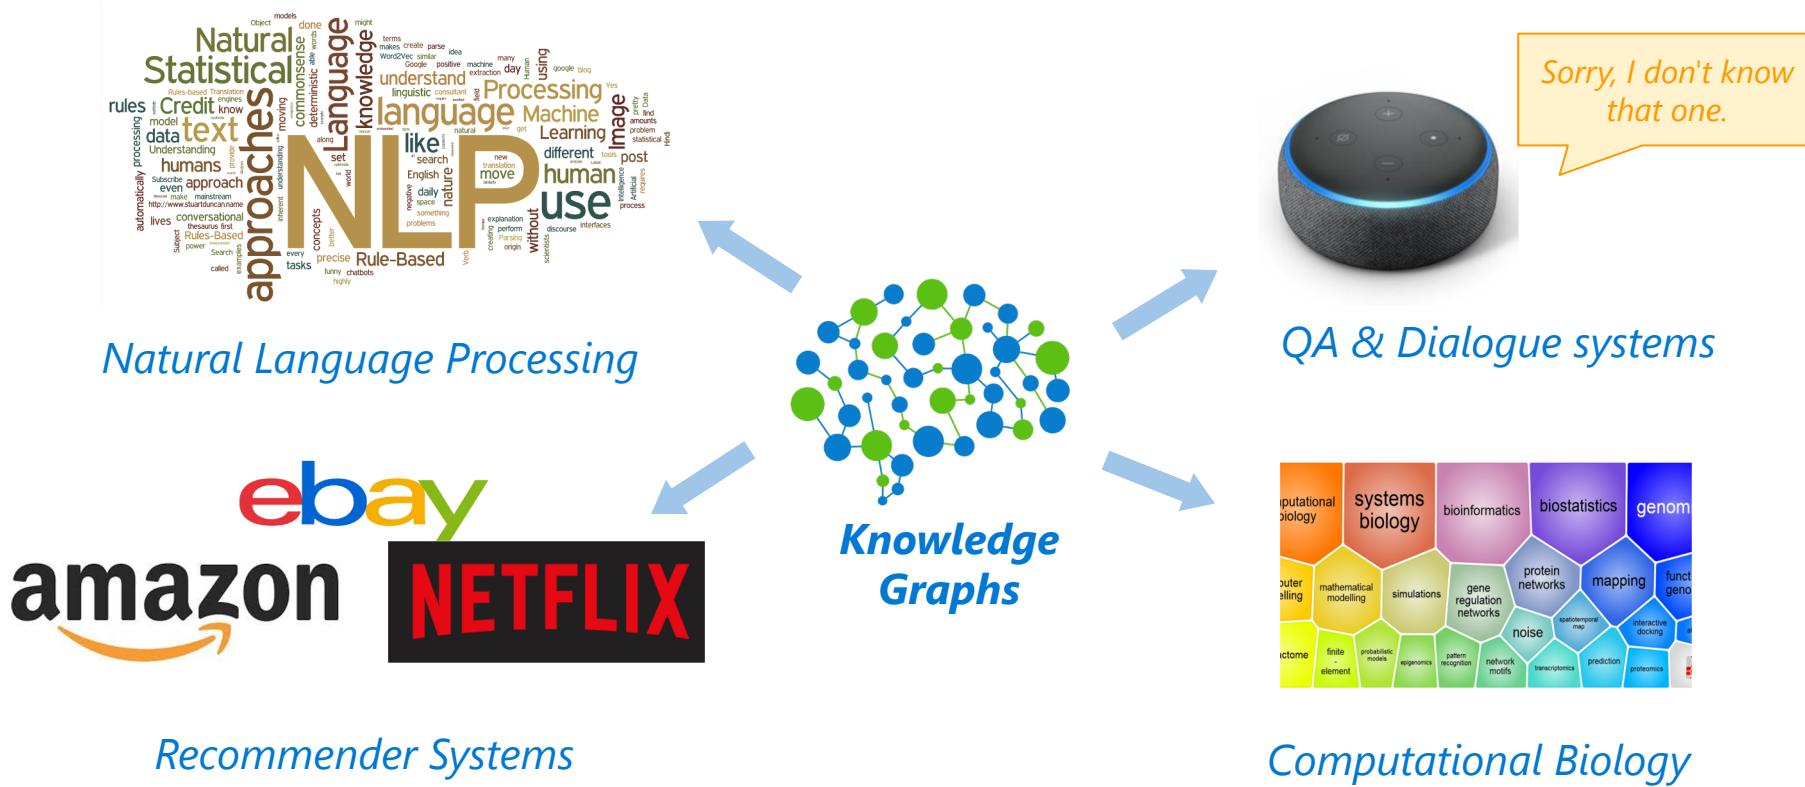

## Common-sense KGs & NLP

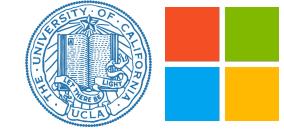

# Knowledge Graphs Are Important

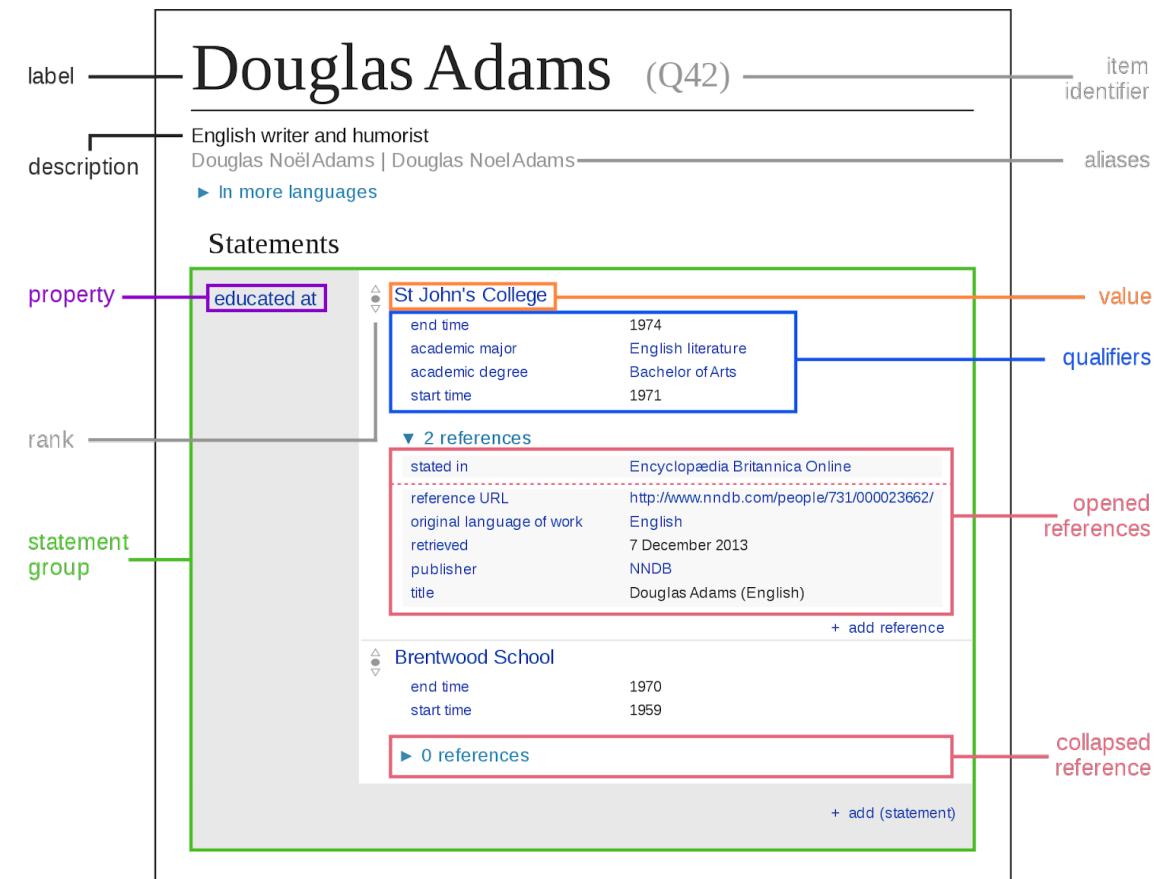

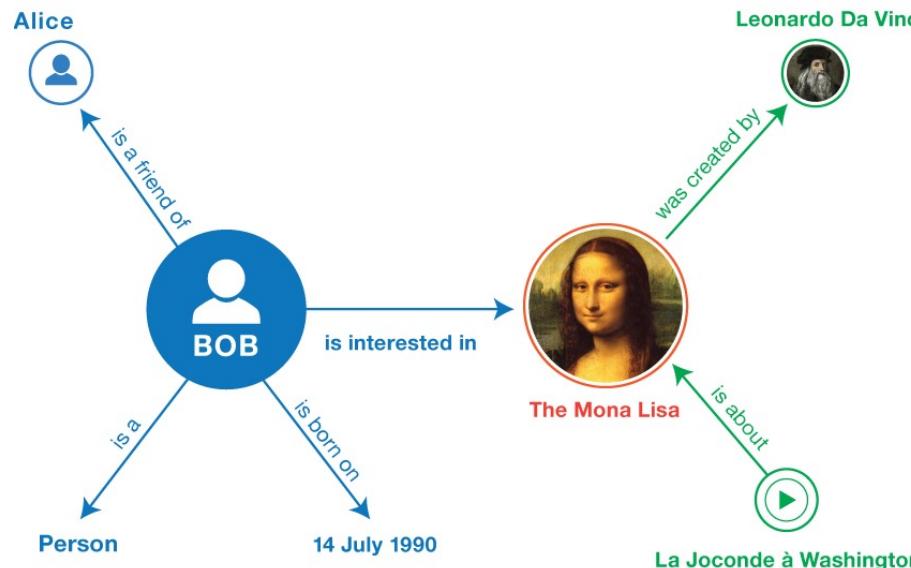

- Foundational to knowledge-driven AI systems
- Enable many downstream applications (NLP tasks, QA systems, etc.)

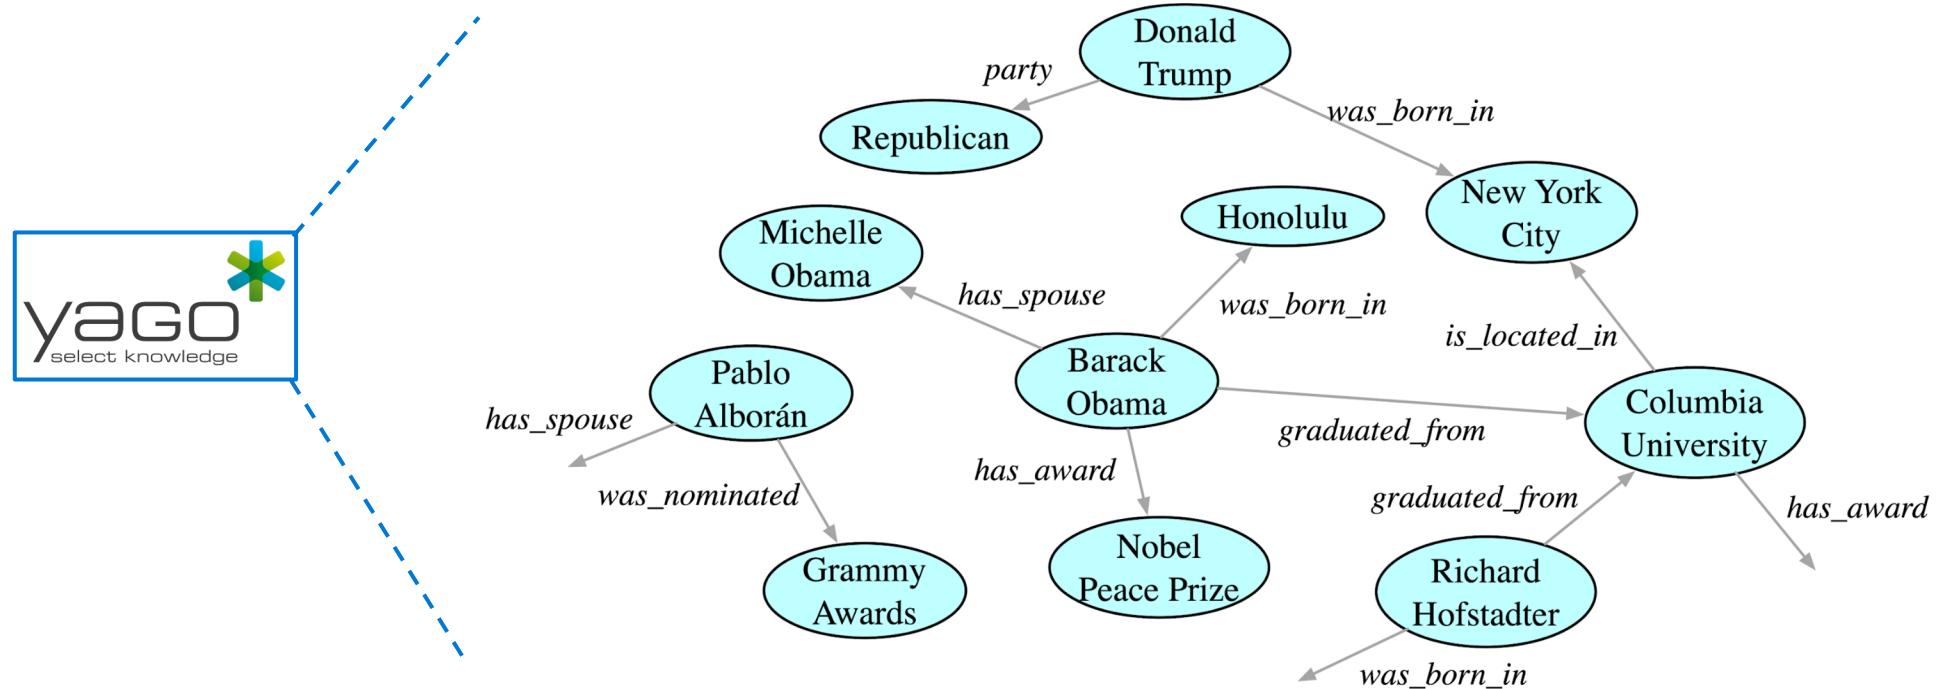

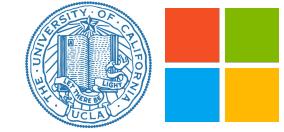

# How are KGs structured or formatted?

- **Triples (RDF)**
  - Represented by: a node for the subject, a node for the object, and an arc/node for the predicate.
  - Example: Semantic Web, medical ontologies, etc.
- **Label-property**
  - Entity, labels, properties, qualifiers, etc.
  - Example: Wikidata

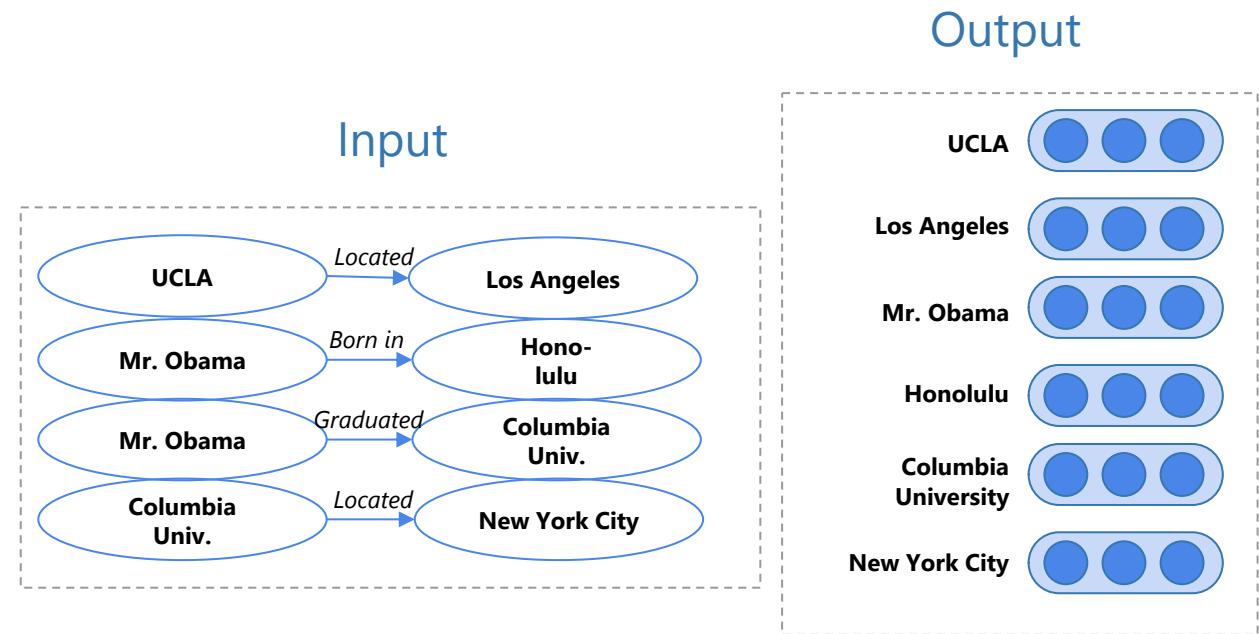

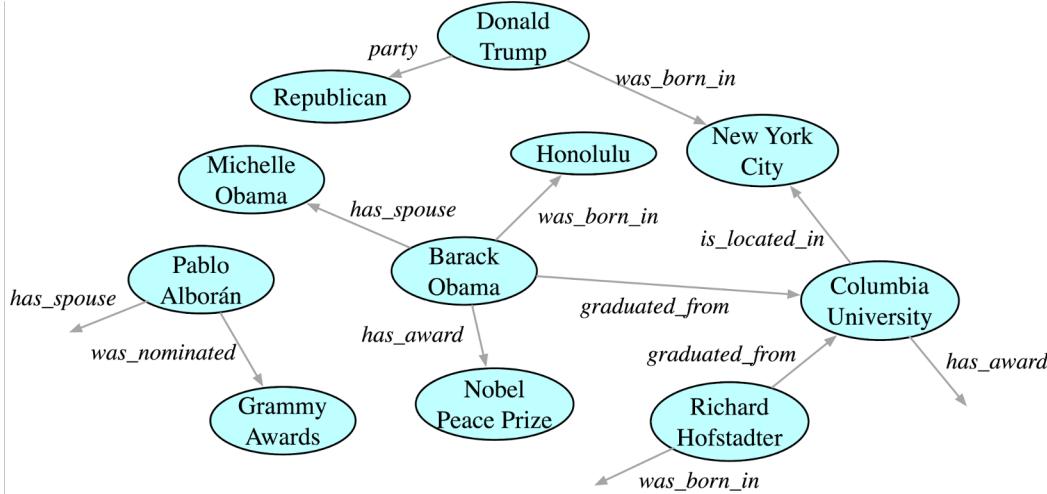

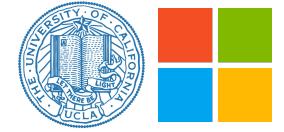

# A KG Snapshot from YAGO, made with triples

# KG Embeddings From Triples

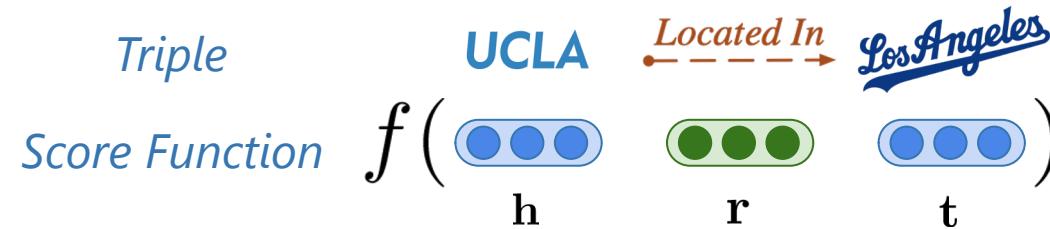

- Knowledge graph embeddings represent entities and relations as latent vectors or matrices and support effective relation learning and inference.
- Input:** Relation facts (triples)
- Output:** Embedding representations of objects and relations

# Learning KG Embeddings

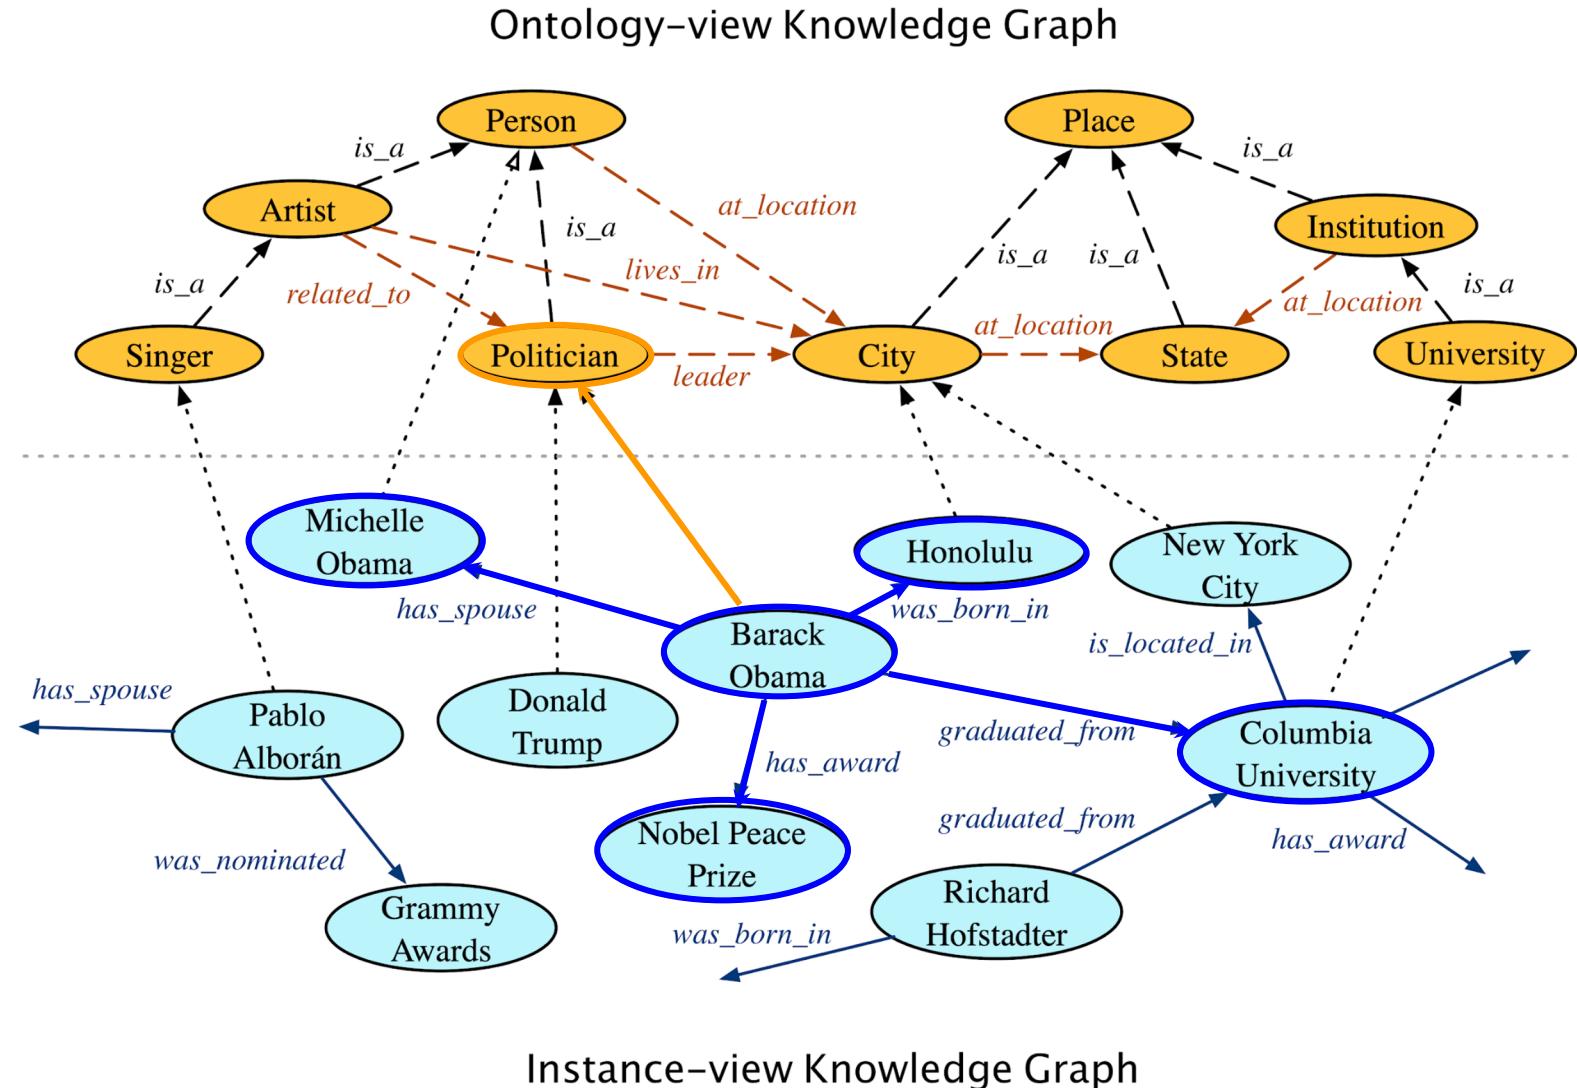

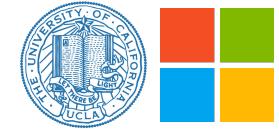

- Key of existing KG embedding methods: Triple score function

- Previous research employ various arithmetic methods to capture observed relations of entities in a single KG (for example, translational distance or similarity)

Model	Score Function	Embeddings
TransE (Bordes et al., 2013)	$-  \mathbf{h} + \mathbf{r} - \mathbf{t}  $	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{R}^k$
TransX	$-  g_{r,1}(\mathbf{h}) + \mathbf{r} - g_{r,2}(\mathbf{t})  $	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{R}^k$
DistMult (Yang et al., 2014)	$(\mathbf{h} \circ \mathbf{t}) \cdot \mathbf{r}$	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{R}^k$
HolE (Nickel et al., 2016)	$(\mathbf{h} \star \mathbf{t}) \cdot \mathbf{r}$	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{R}^k$
ComplEx (Trouillon et al., 2016)	$\text{Re}\langle \mathbf{r}, \mathbf{h}, \bar{\mathbf{t}} \rangle$	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{C}^k$
ConvE (Dettmers et al., 2017)	$\langle \sigma(\text{vec}(\sigma([\mathbf{r}, \mathbf{h}] * \Omega)) \mathbf{W}), \mathbf{t} \rangle$	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{R}^k$
RotatE (Sun et al., 2019)	$-  \mathbf{h} \circ \mathbf{r} - \mathbf{t}  ^2$	$\mathbf{h}, \mathbf{r}, \mathbf{t} \in \mathbb{C}^k,  r_i  = 1$

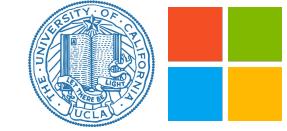

# A different view: How can we learn “Obama”?

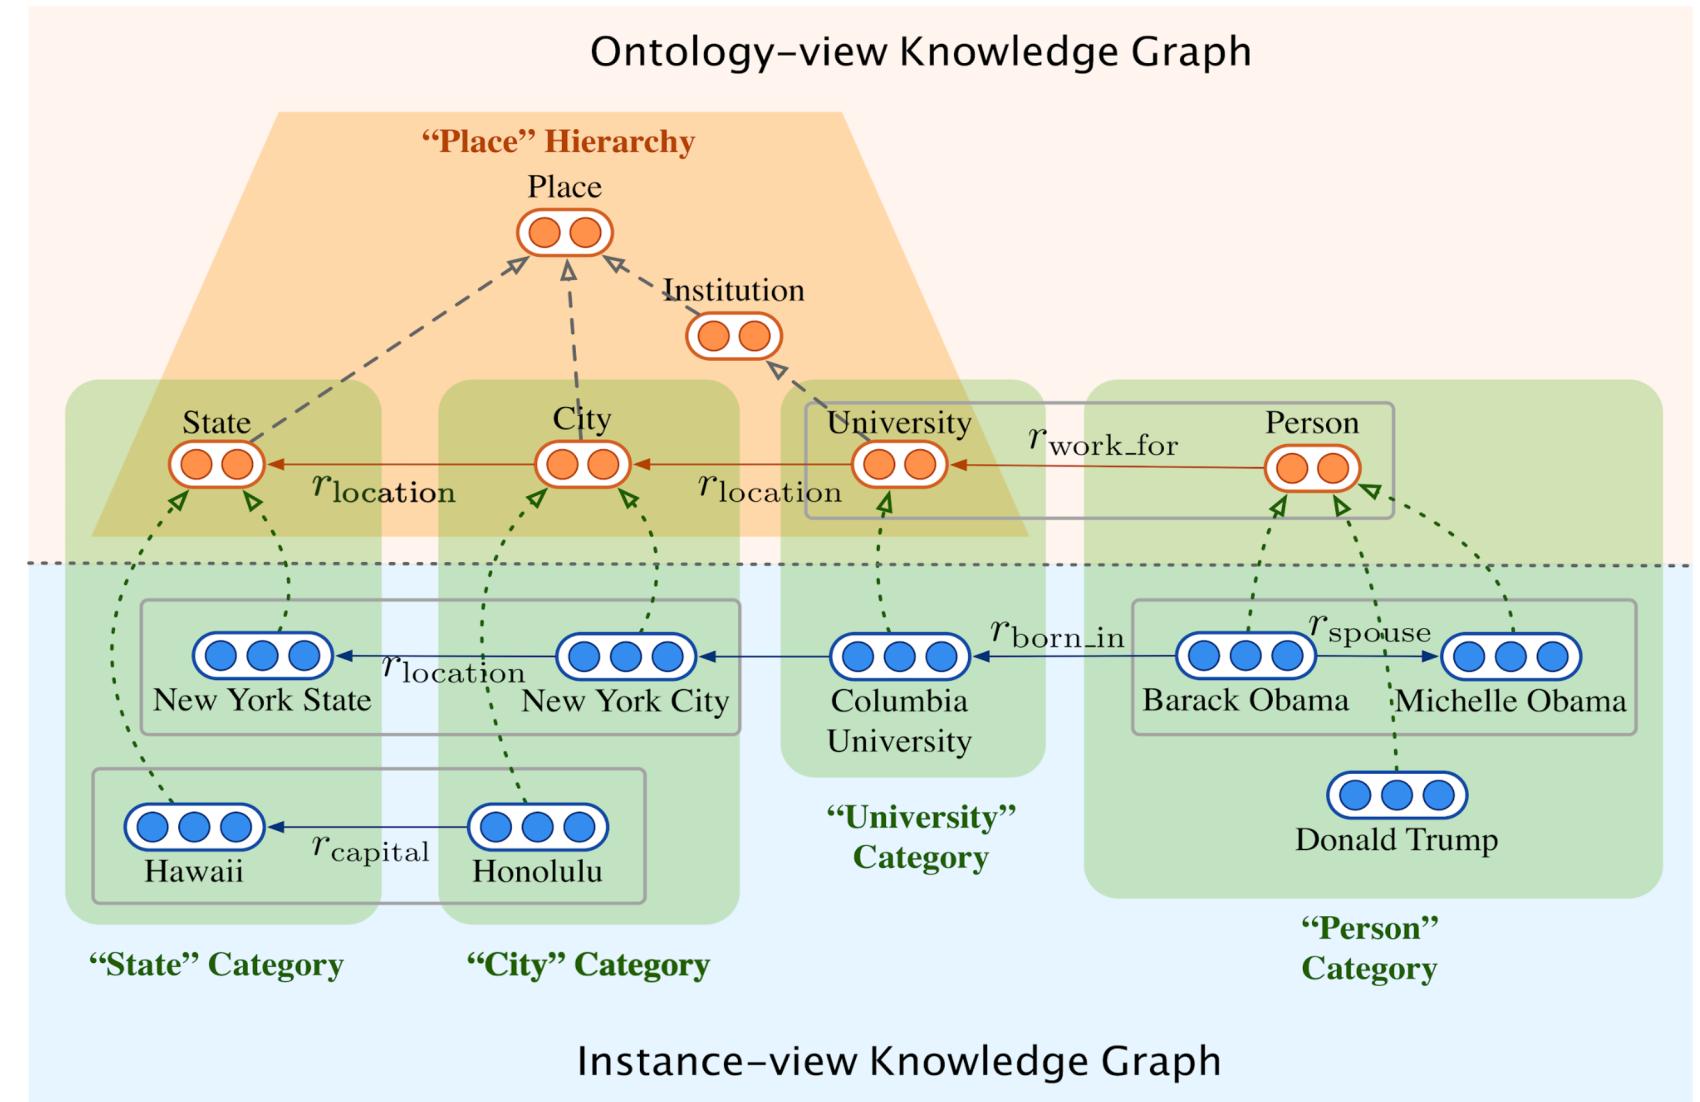

# JOIE: Universal representation learning of knowledge bases by jointly embedding instances and ontological concepts

*How can we manage to jointly learn the instance and ontology?*

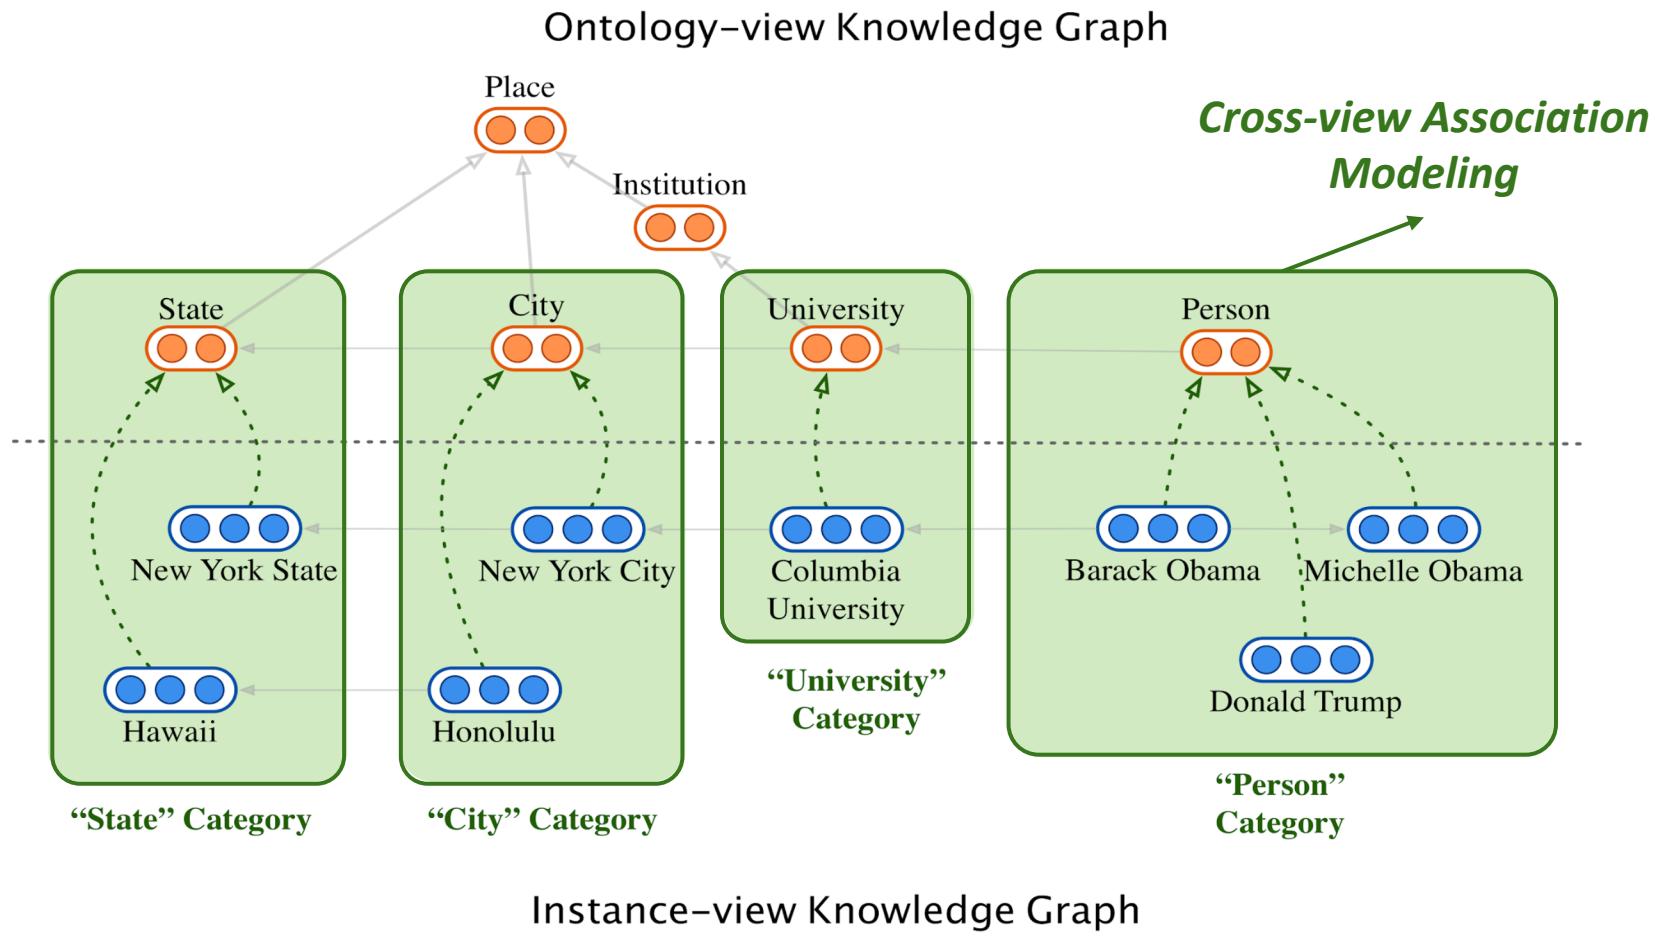

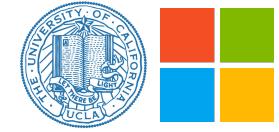

# JOIE: Learning on Instance & Ontology View

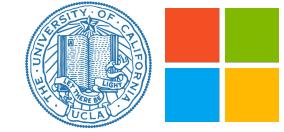

- Cross-view Association model
- Intra-view model

# JOIE: Cross-view Association

# JOIE: Cross-view Association Modeling

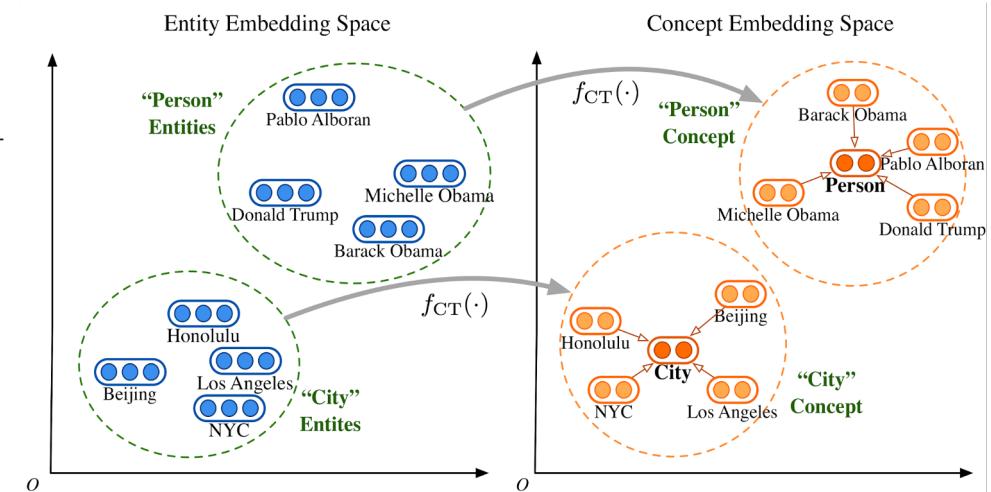

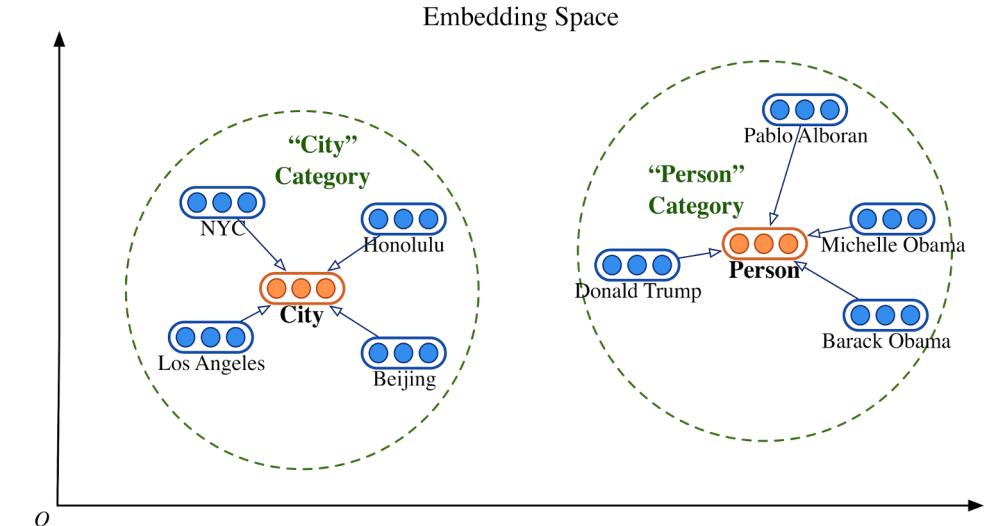

- **Goal:** capture associations between the entities  $\mathbf{e}$  and corresponding concepts  $\mathbf{c}$
- **Cross-view Grouping (CG)**

$$J_{\text{Cross}}^{\text{CG}} = \frac{1}{|\mathcal{S}|} \sum_{(e,c) \in \mathcal{S}} [||\mathbf{c} - \mathbf{e}||_2 - \gamma^{\text{CG}}]_+$$

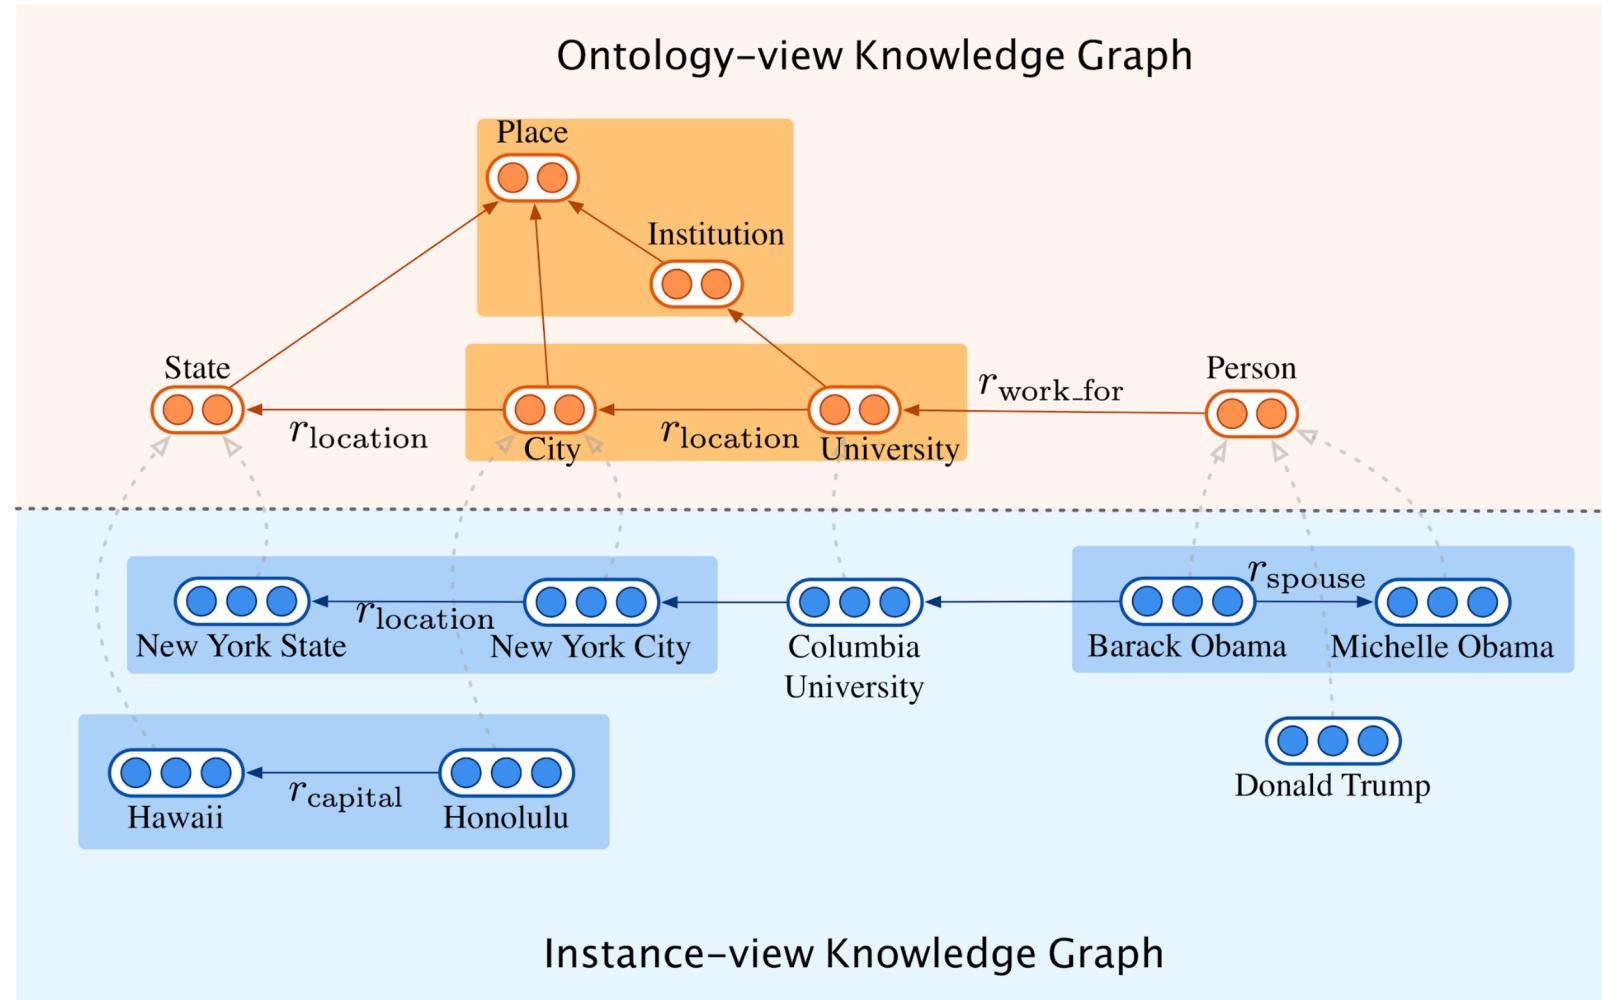

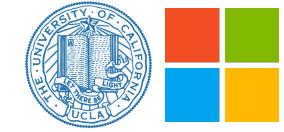

- **Cross-view Transformation (CT)**

$$f_{\text{CT}}(\mathbf{e}) = \sigma(\mathbf{W}_{\text{ct}} \cdot \mathbf{e} + \mathbf{b}_{\text{ct}})$$

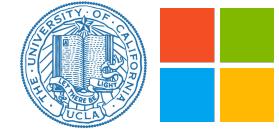

$$J_{\text{Cross}}^{\text{CT}} = \frac{1}{|\mathcal{S}|} \sum_{\substack{(e,c) \in \mathcal{S} \\ \wedge (e,c') \notin \mathcal{S}}} [\gamma^{\text{CT}} + ||\mathbf{c} - f_{\text{CT}}(\mathbf{e})||_2 - ||\mathbf{c}' - f_{\text{CT}}(\mathbf{e})||_2]_+$$

# JOIE: Intra-view

# JOIE: Intra-view Model

- Goal: To embed the relational structures in the instance view of the KB
- Apply any KG embedding techniques on instance view
  - Three representatives: TransE, DistMult, and HolE

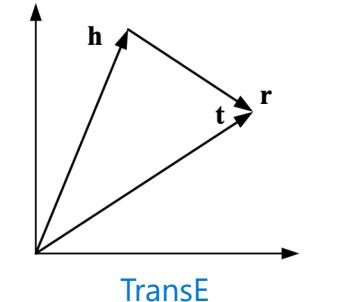

$$f_{\text{TransE}}(\mathbf{h}, \mathbf{r}, \mathbf{t}) = -\|\mathbf{h} + \mathbf{r} - \mathbf{t}\|_2$$

$$f_{\text{Mult}}(\mathbf{h}, \mathbf{r}, \mathbf{t}) = (\mathbf{h} \circ \mathbf{t}) \cdot \mathbf{r}$$

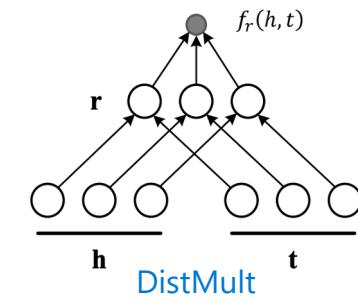

$$f_{\text{HolE}}(\mathbf{h}, \mathbf{r}, \mathbf{t}) = (\mathbf{h} \star \mathbf{t}) \cdot \mathbf{r}$$

- Training on contrastive margin loss

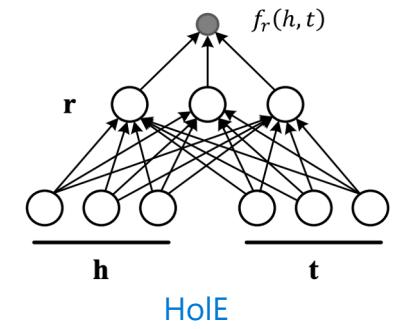

$$J_{\text{Intra}}^{\mathcal{G}} = \frac{1}{|\mathcal{G}|} \sum_{\substack{(h, r, t) \in \mathcal{G} \\ \wedge (h', r, t') \notin \mathcal{G}}} [\gamma^{\mathcal{G}} + f(\mathbf{h}', \mathbf{r}, \mathbf{t}') - f(\mathbf{h}, \mathbf{r}, \mathbf{t})]_+$$

TransE

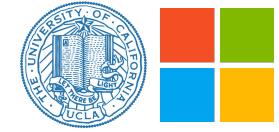

DistMult

HolE

# JOIE: Joint Training & Model Summarization

---

- Two model components: Cross-view model and intra-view model
- Cross-view association model  $\Rightarrow J_{\text{Cross}}$ 
  - Categorical grouping (CG)
  - Categorical transformation (CT)
- Intra-view model  $\Rightarrow J_{\text{Intra}}$ 
  - Can apply any KG embedding on each view
  - Optional: Hierarchical-aware modeling on ontological view specifically for taxonomy meta relations
- Joint training on cross-view loss and intra-view loss

$$J = J_{\text{Intra}} + \omega \cdot J_{\text{Cross}}$$

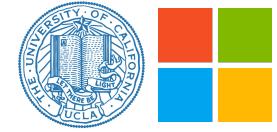

# JOIE: Experiment Setup

- Datasets: YAGO26K-906 (from YAGO) and DB111K-184 (from DBpedia), ontology-view leveraged from ConceptNet
- Tasks: *Triple completion* and *entity typing*
- Evaluation metrics
  - Triple completion: *MRR*, *Hit@K score* ( $K=1,3,10$ )
  - Entity typing: *Accuracy* (*Hit@1*), *Hit@3 Score*
- Baselines: TransE, DistMult, HolE, TransC, MTransE

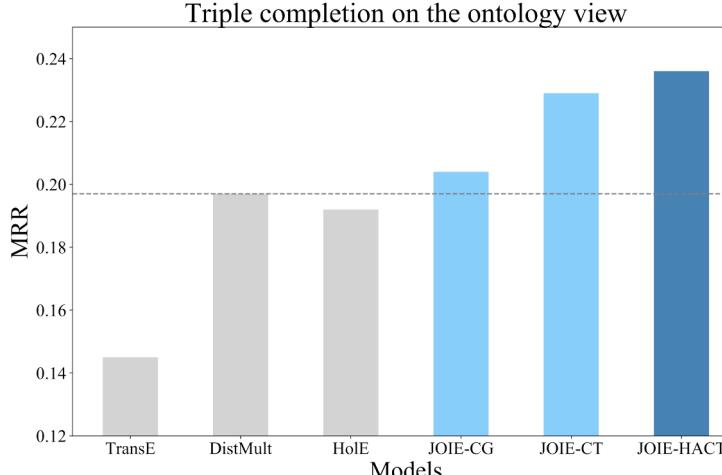

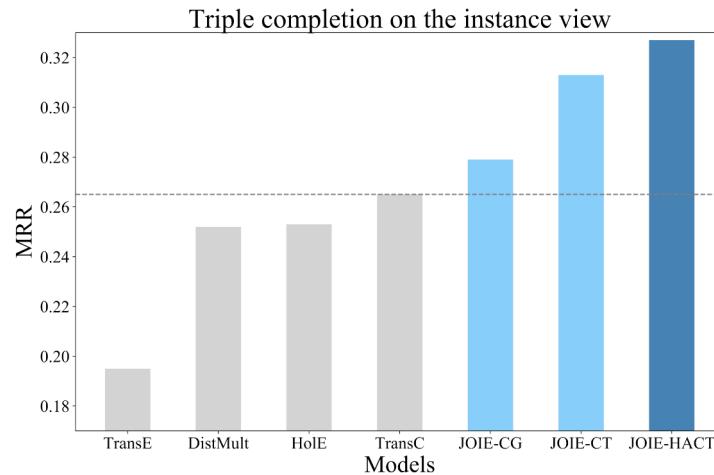

Dataset	Instance Graph $\mathcal{G}_I$			Ontology Graph $\mathcal{G}_O$			Type Links $\mathcal{S}$
	#Entities	#Relations	#Triples	#Concepts	#Meta-relations	#Triples	
YAGO26K-906	26,078	34	390,738	906	30	8,962	9,962
DB111K-174	111,762	305	863,643	174	20	763	99,748

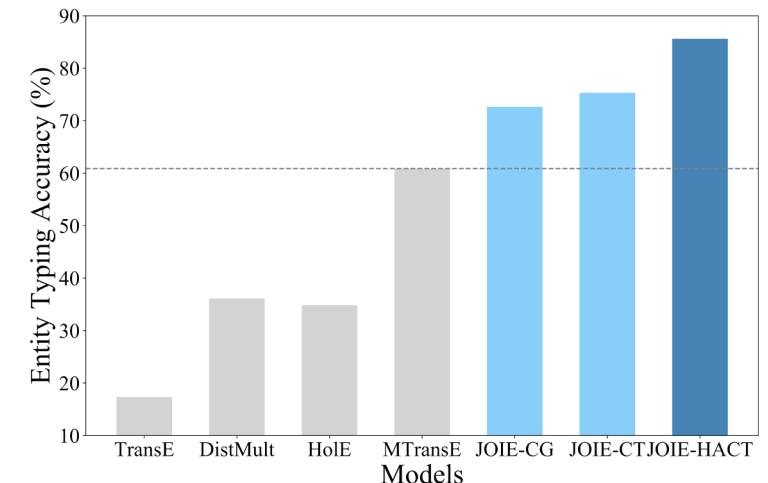

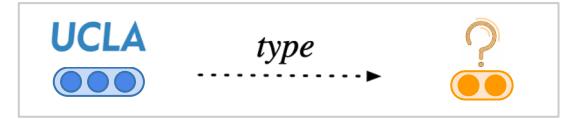

# JOIE: Results

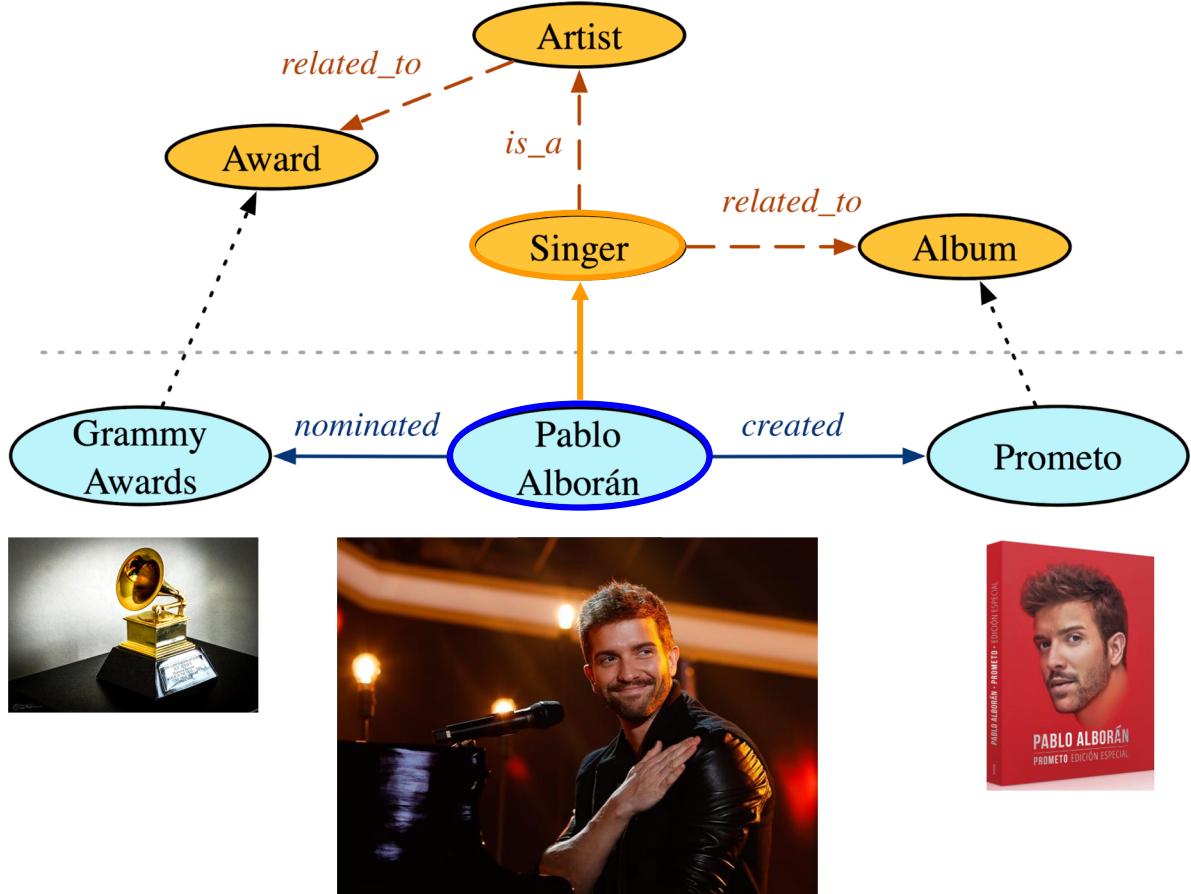

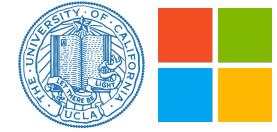

## Triple Completion

## Entity Typing

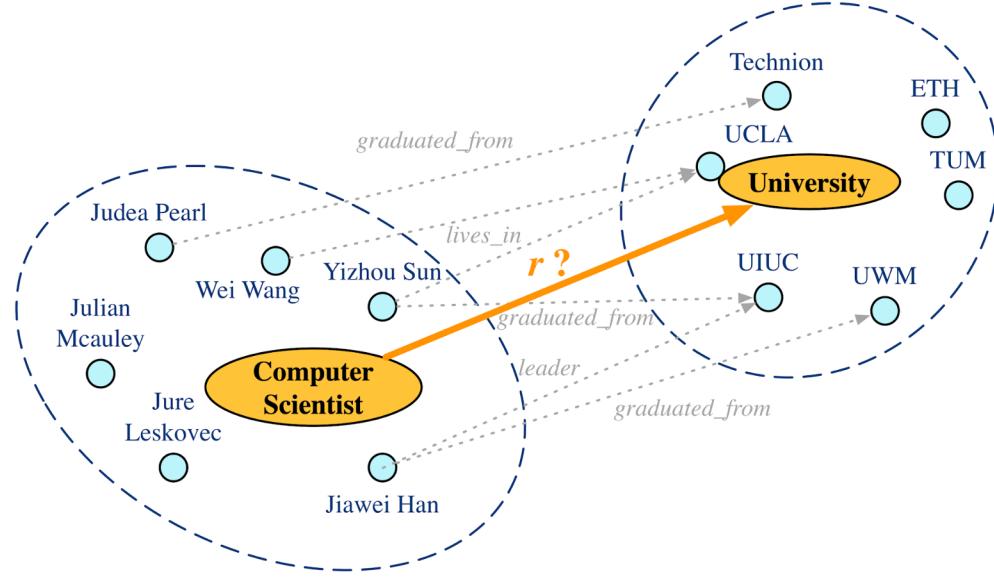

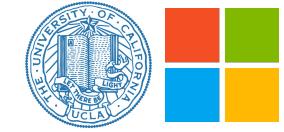

# Case Study: Long-tail Entity Typing

## Example of long-tail entity typing

Entity	Model	Top 3 Concept Prediction

*"How about just buying more? I want to go to the space." said J. Bezos*

# Task: Complementary Recommendation

Think about one customer who plans to buy a tennis racket (e.g., Head SpeedX Djokovic racket).

What would you recommend for him to purchase together?

- List 1: three more tennis rackets? → Sorry, we are not looking for substitutes!
- List 2: three sets of tennis balls? → Hmm, not bad, but only need one is good enough. Can we do better?
- List 3: one tennis ball pack, one bag and one headband? → Sound good this time!

**Frequently bought together**

The screenshot shows a "Frequently bought together" section for three pillows. The items are:

- COOLMAX Pillow
- Beckham Hotel Collection Gel Pillow (2-Pack)
- Elegear Cooling Pillowcases

Total price: \$92.97

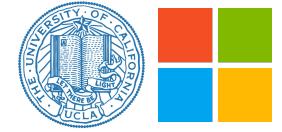

Add all three to Cart    Add all three to List

This item: Cooling Shredded Memory Foam Bed Pillow for Sleeping- Adjustable to Thick Thin - Pillow for Side... \$34.99

Beckham Hotel Collection Gel Pillow (2-Pack) - Luxury Plush Gel Pillow - Dust Mite Resistant... \$34.99

Elegear Cooling Pillowcases for Night Sweats and Hot Flashes, Japanese Q-Max 0.4 Cooling Fiber... \$22.99

# Problem Definition

- Given the input as catalog features (including item type) and customers behavior data, for a query item  $i$ , we recommend a set of items  $S(i)$ , aiming at optimizing their co-purchase probability and recommendation diversity.

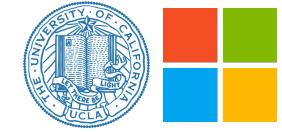

query item  $i$

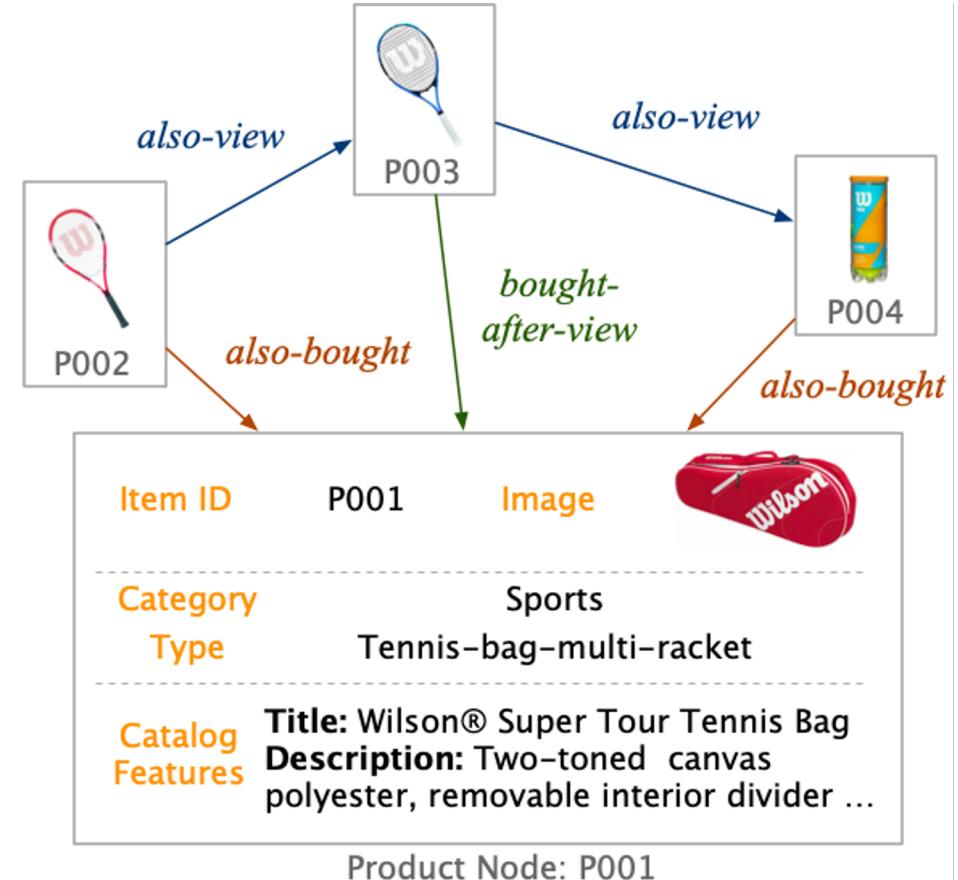

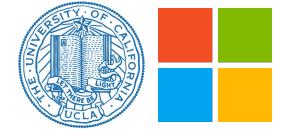

Recommendation set  $S(i)$

# "Behavior-based" Product Graphs (PG)

- Behavior based product graph → Attributed heterogeneous information networks (KG)
- **Node:** Product items with attributes (title, description, category, keywords)
- **Edges:** Customer browsing/purchase behaviors (such as also-bought, also-view, bought-after-view, as important indicators of substitutes or complements)
- Note that there are many alternative ways to construct product graphs, with different modeling goals.

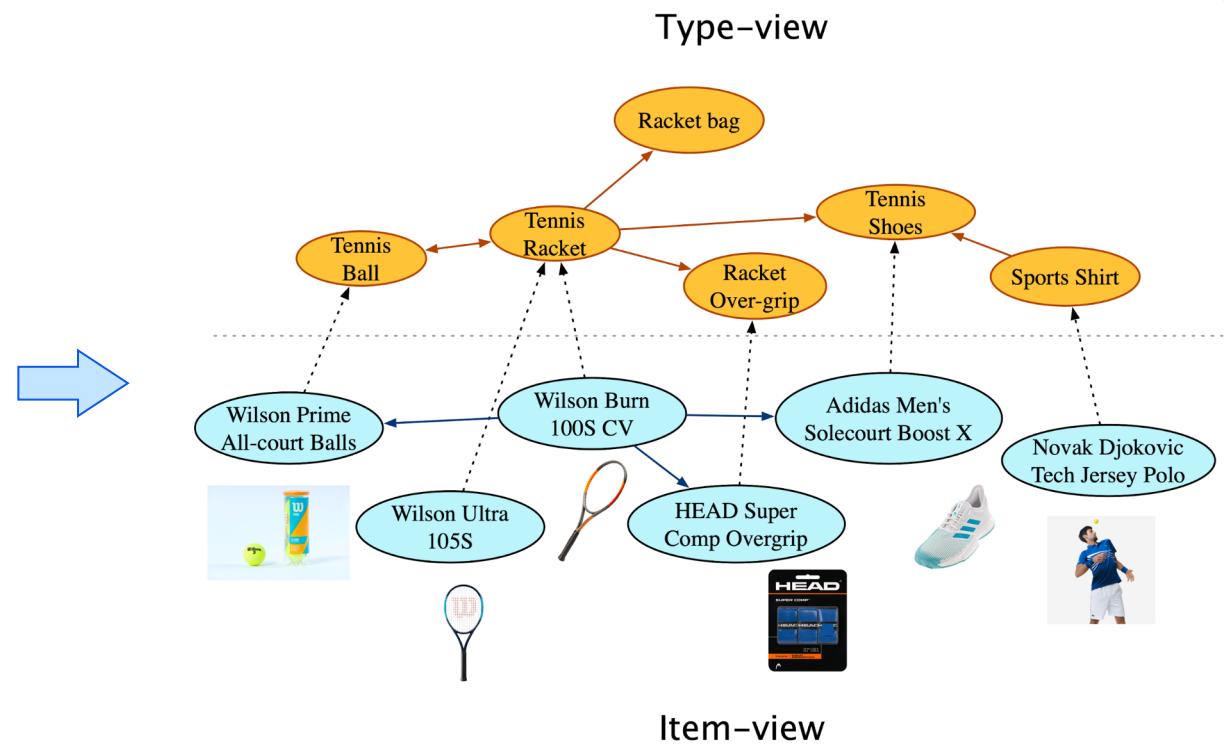

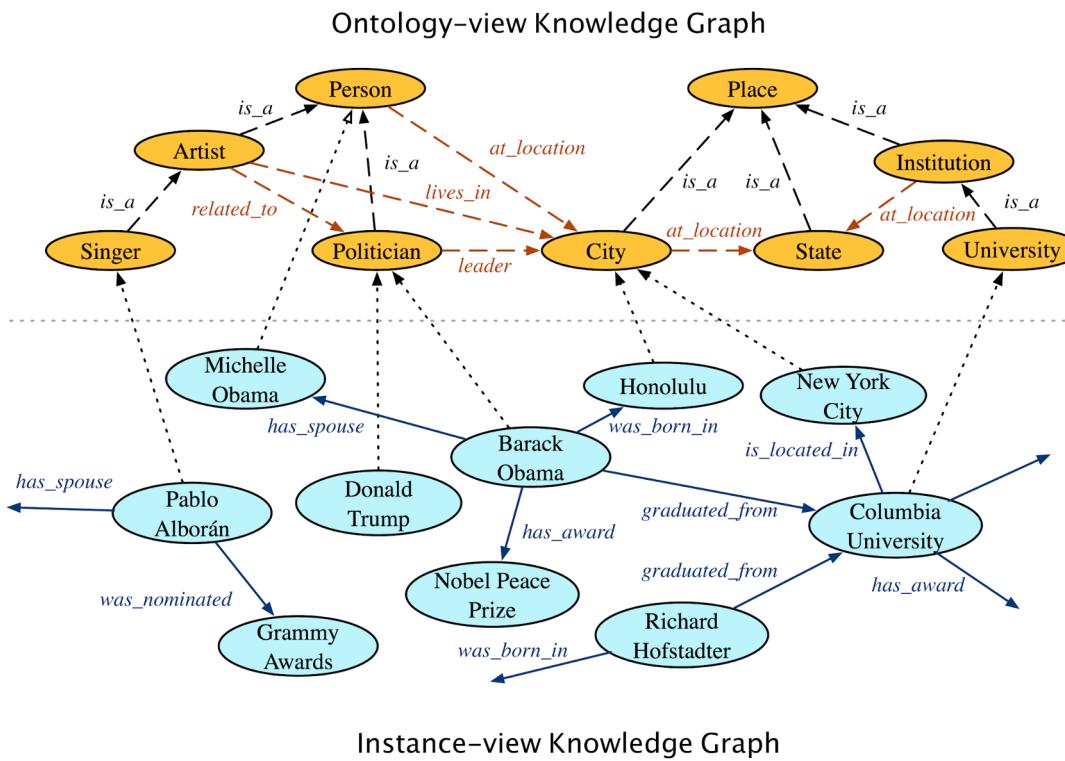

# \*Quick Comparison of KG and PG

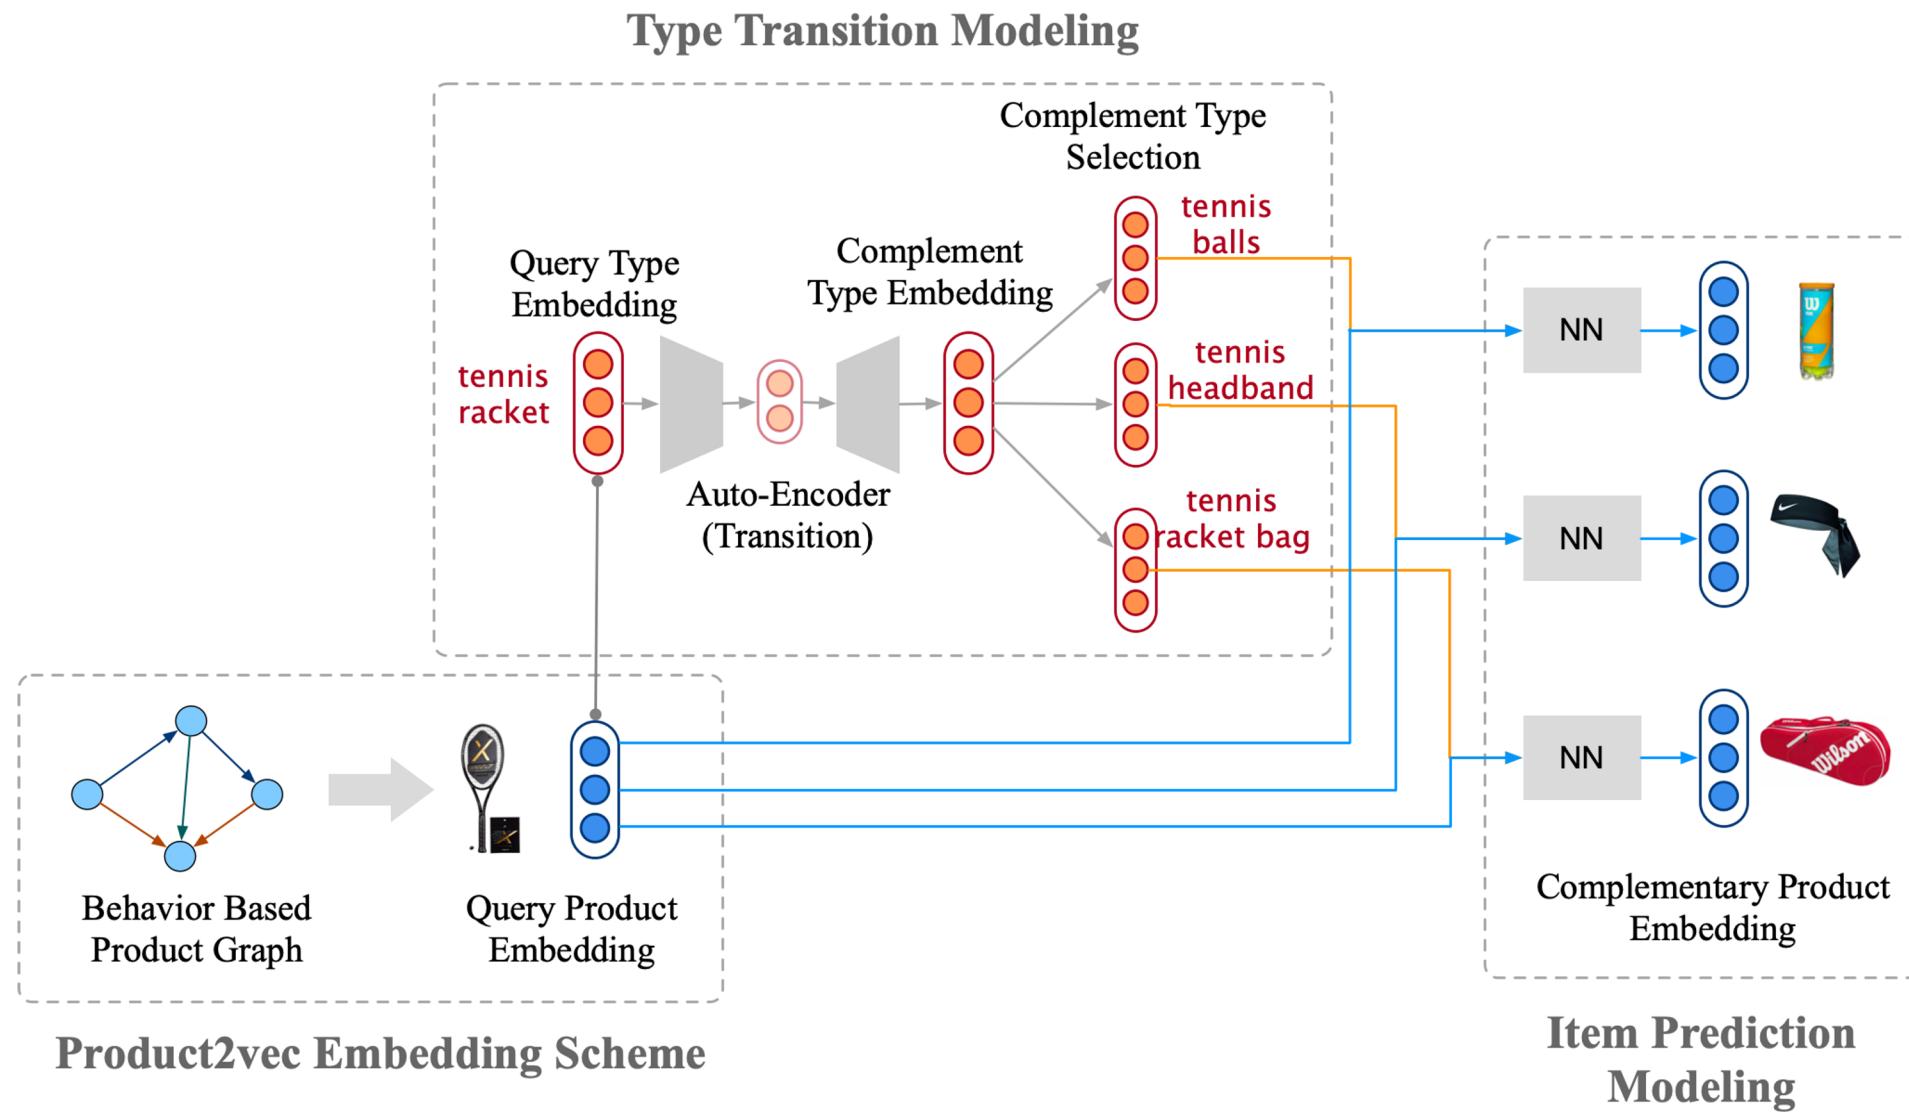

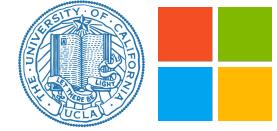

Comparison	Knowledge Graphs	Product Graphs
<b>Source</b>	Established facts	Product catalog, user-product interaction
<b>Quality</b>	Observed facts are well-established and plausible.	Much noisier
<b>Quantity of relations</b>	Typically, thousands of possible relations in real world, such as <code>born_in</code> , <code>director_of</code> , etc	A few relations defined from specified user behavior, such as <code>also_view</code> and <code>also_bought</code>
<b>Attributes</b>	Entity types, numerical features, descriptions, and many other additional features	
<b>Logic rules</b>	Available for logical inference and refinement.	Possibly a few rules. Similar products may have similar complements.
<b>Downstream tasks</b>	Knowledge completion, relation extraction, question answering, etc.	Recommendation, searching, personalization, etc.

# Connecting KG to PG

Product item to product type relation in PG is like entity-concept association in KG.

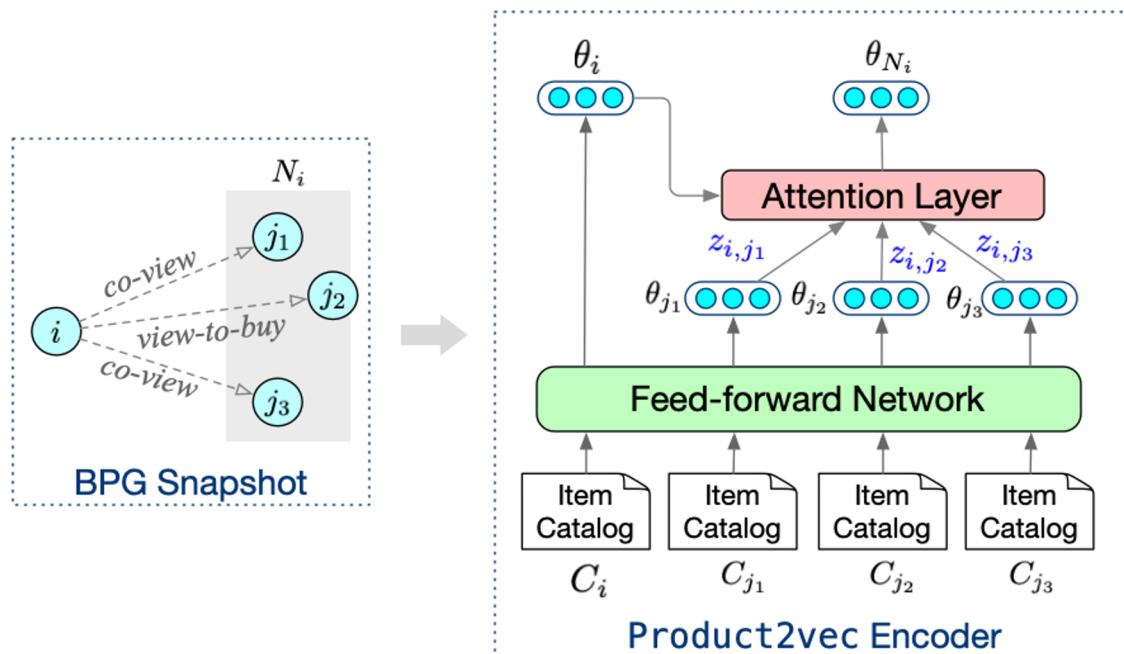

# Product Companion: Workflow

# Base Module: Product2vec

- GNN-based product representation learning framework
- FNN transforms the original textual features to latent embeddings and later aggregate the information from similar products selectively by the attention layer.

FNN Model:

$$\theta_i = FFN(C_j) = \sigma \left( \sigma \left( C_i W^{(1)} + b^{(1)} \right) W^{(2)} + b^{(2)} \right) W^{(3)} + b^{(3)}$$

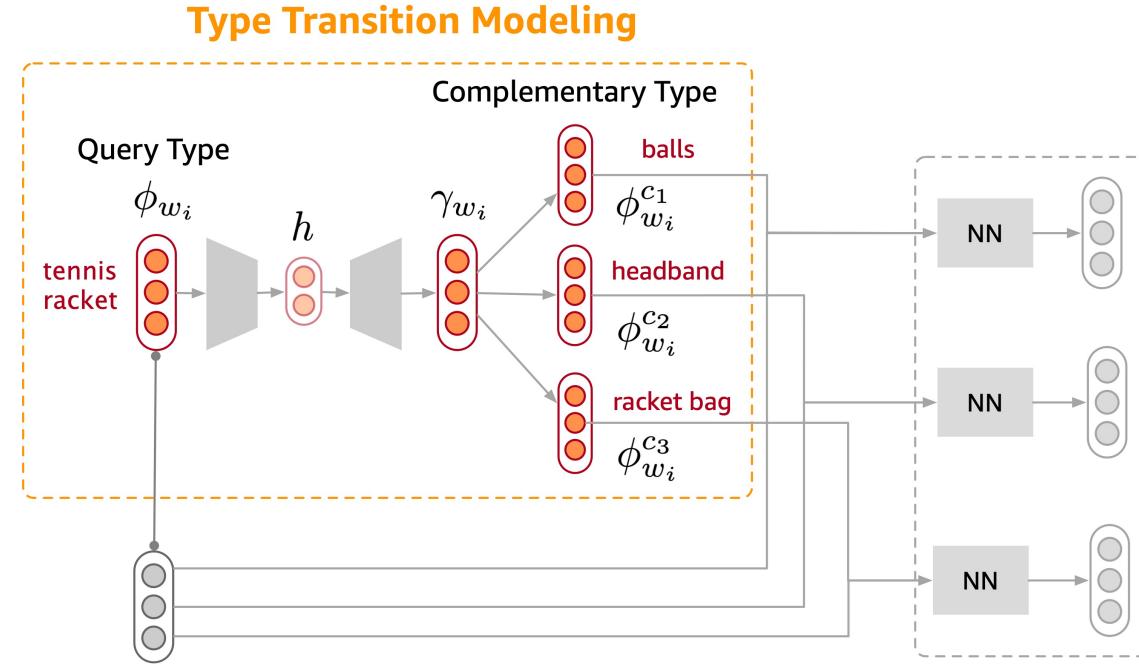

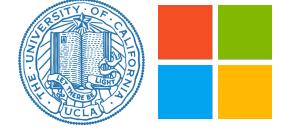

Attention Weight:

$$z_{i,j} = \text{softmax}_j (\theta_i^T \theta_j) = \frac{\exp(\theta_i^T \theta_j)}{\sum_{j' \in N_i} \exp(\theta_i^T \theta_{j'})}$$

Product2Vec training loss:

$$L = \sum_{i \in \mathcal{I}} \sum_{y \in \{\pm 1\}} \{ \max (\epsilon - y \cdot (\lambda - \|\theta_i - \theta_{N_i}\|_2^2)) \}$$

# Module 2: Complementary Type Transition

Auto-encoder based type transition model:

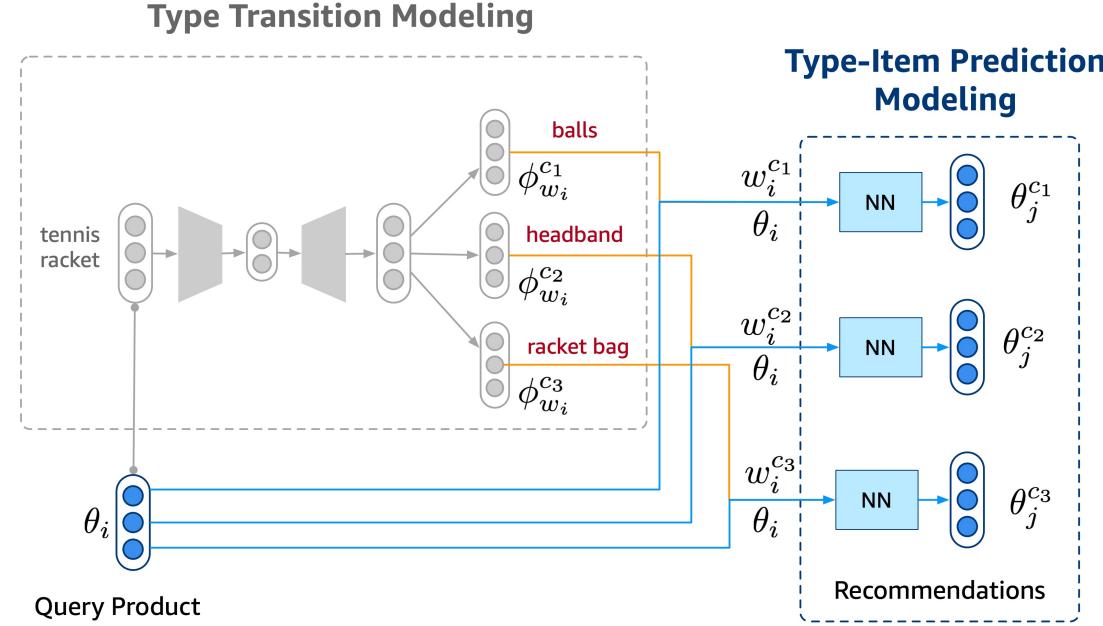

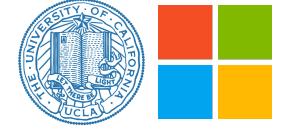

$$h = \text{Dropout} \left( \text{ReLU} \left( \phi_{w_i} W^{(4)} + b^{(4)} \right) \right)$$

$$\gamma_{w_i} = h W^{(5)} + b^{(5)}$$

Training loss:

$$\min \sum_{i,j \in \mathcal{T}} \left( \max \left\{ 0, \epsilon_w - y_{i,j} \left( \lambda_w - \|\gamma_{w_i} - \phi_{w_j}^c\|_2^2 \right) \right\} \right)$$

# Module 3: Complementary Item Prediction

Item prediction neural model:

$$\theta_i^{w_c} = \theta_i \odot (\phi_{w_c}^c W^{(6)} + b^{(6)}),$$

s.t.,  $\|\phi_{w_c}^c - \gamma_{w_i}\|_2^2 \leq \beta$

Training loss:

$$\min \sum_{i,j \in \mathcal{T}} \max \{0, \epsilon_i - y_{i,j} (\lambda_i - \|\theta_i^{w_c} - \theta_j\|_2^2)\}$$

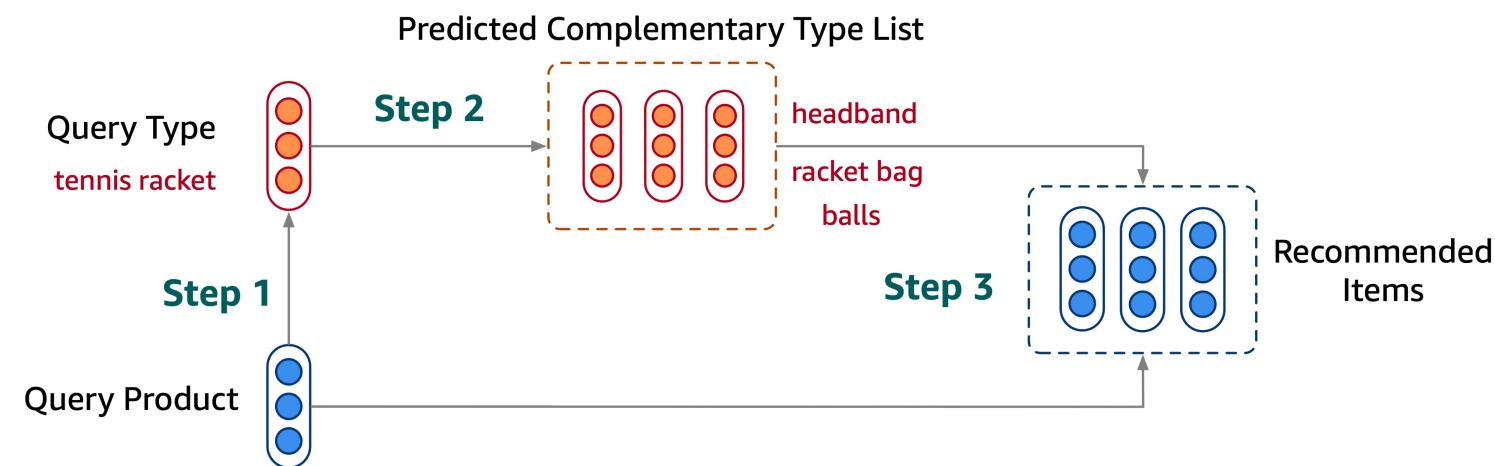

# Joint Training and Inference

Joint training on type transition and item prediction:

$$\min \sum_{i,j \in \mathcal{T}} \alpha \left( \max \left\{ 0, \epsilon_i - y_{i,j} (\lambda_i - \|\theta_i^{w_j} - \theta_j\|_2^2) \right\} \right) + (1 - \alpha) \left( \max \left\{ 0, \epsilon_w - y_{i,j} (\lambda_w - \|\gamma_{w_i} - \phi_{w_j}^c\|_2^2) \right\} \right)$$

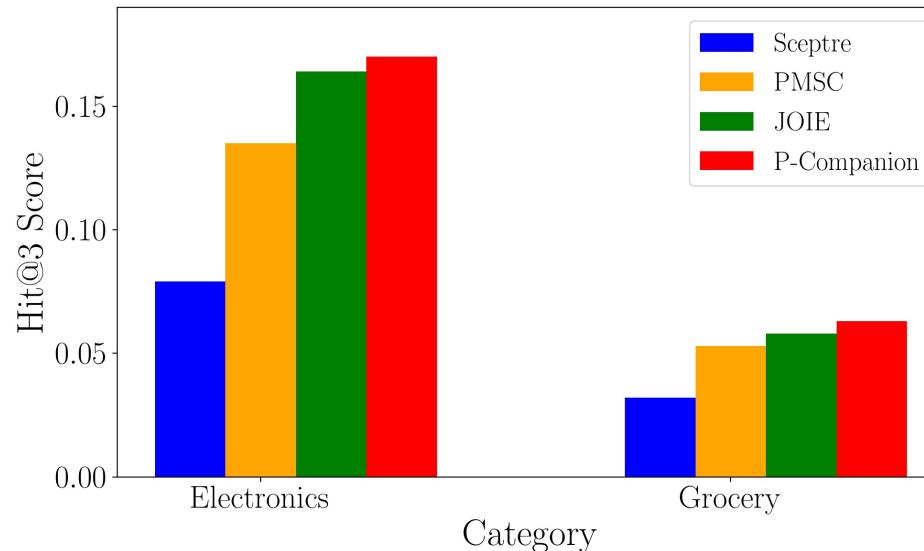

Item prediction loss
Type transition loss

Inference stage:

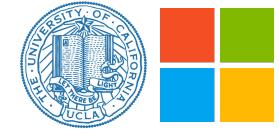

# Evaluation: From history purchase data

- Given a pair  $(i, j)$ , associated with type  $w_i$  and  $w_j$ , from co-purchase record as ground truth, we ask our model as well as all baselines to output recommendation list (with predicted complementary types), and consider the following:
  - whether item  $j$  is in the list. → **Item level**
  - Whether type  $w_j$  is in the predicted types → **Type level**
- Metric: Hit@K score (both item level and type level, if applicable)
- Baselines: Sceptre, PMSC, JOIE

Dataset		Electronics	Grocery
Model & Setting		Hit@60	Hit@60
Sceptre		0.124	0.085
PMSC		0.179	0.139
JOIE		0.200	0.155
P-Companion	1 type × 60 items	0.138	0.088
	3 types × 20 items	0.198	0.153
	5 types × 12 items	0.222	<b>0.189</b>
	6 types × 10 items	<b>0.227</b>	0.187

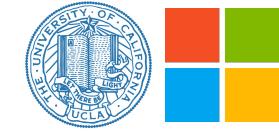

# Case Study: Type Transition Prediction

# Research Development Map (Ongoing)

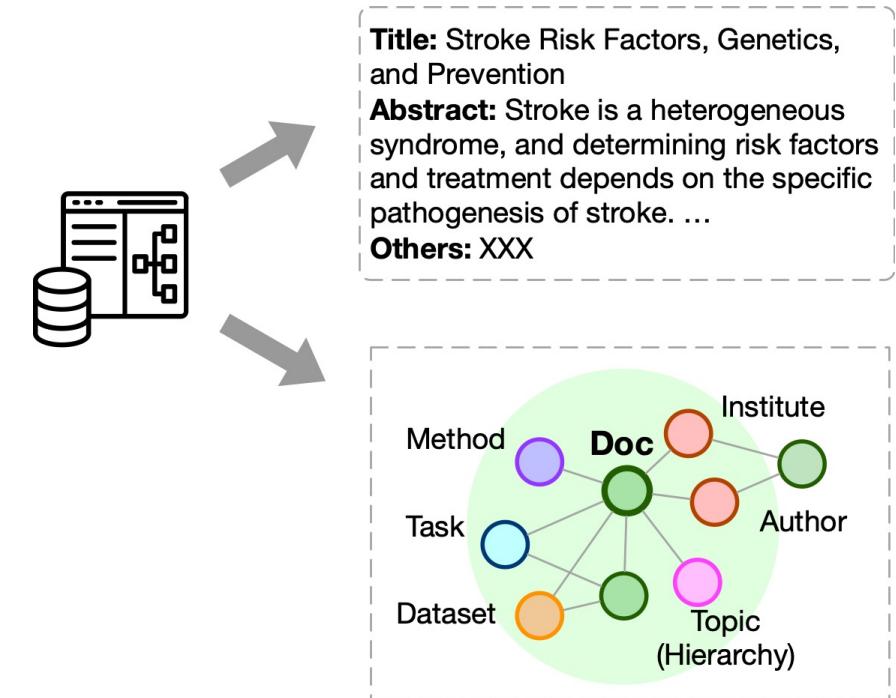

# KG Representation with Graph Attributes

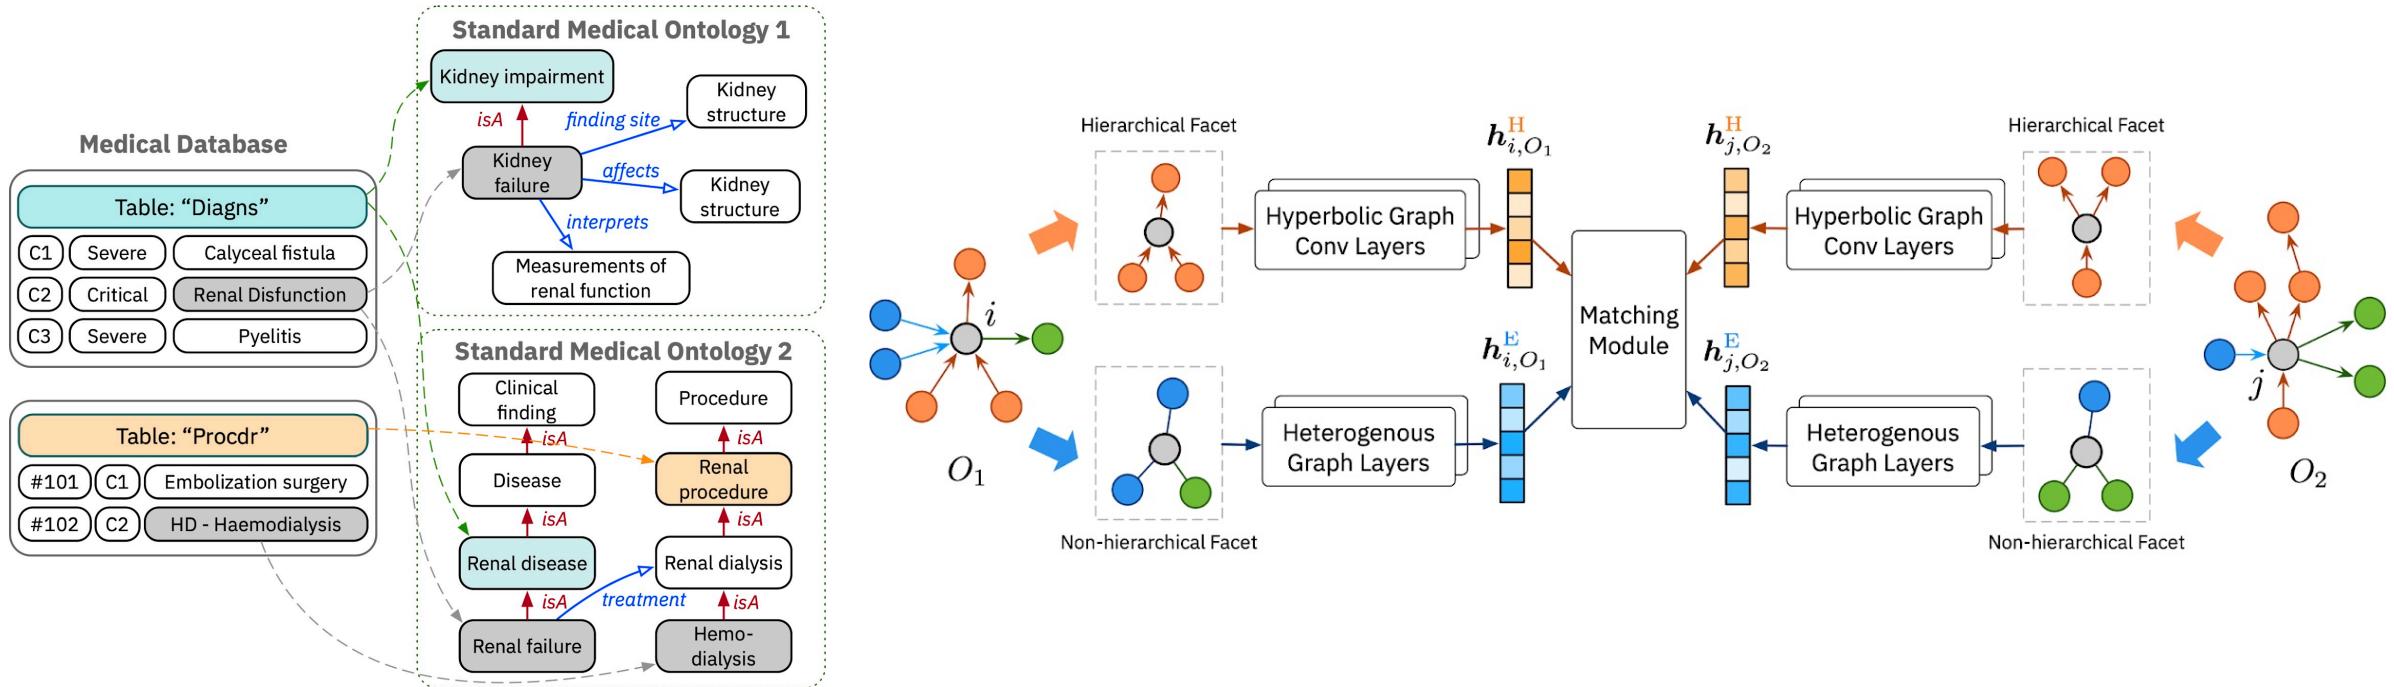

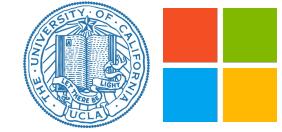

Example 1: Reaction Graph in Bio-KG

Example 2: Document Structured Knowledge

# Hybrid-GNN Data-Ontology Matching

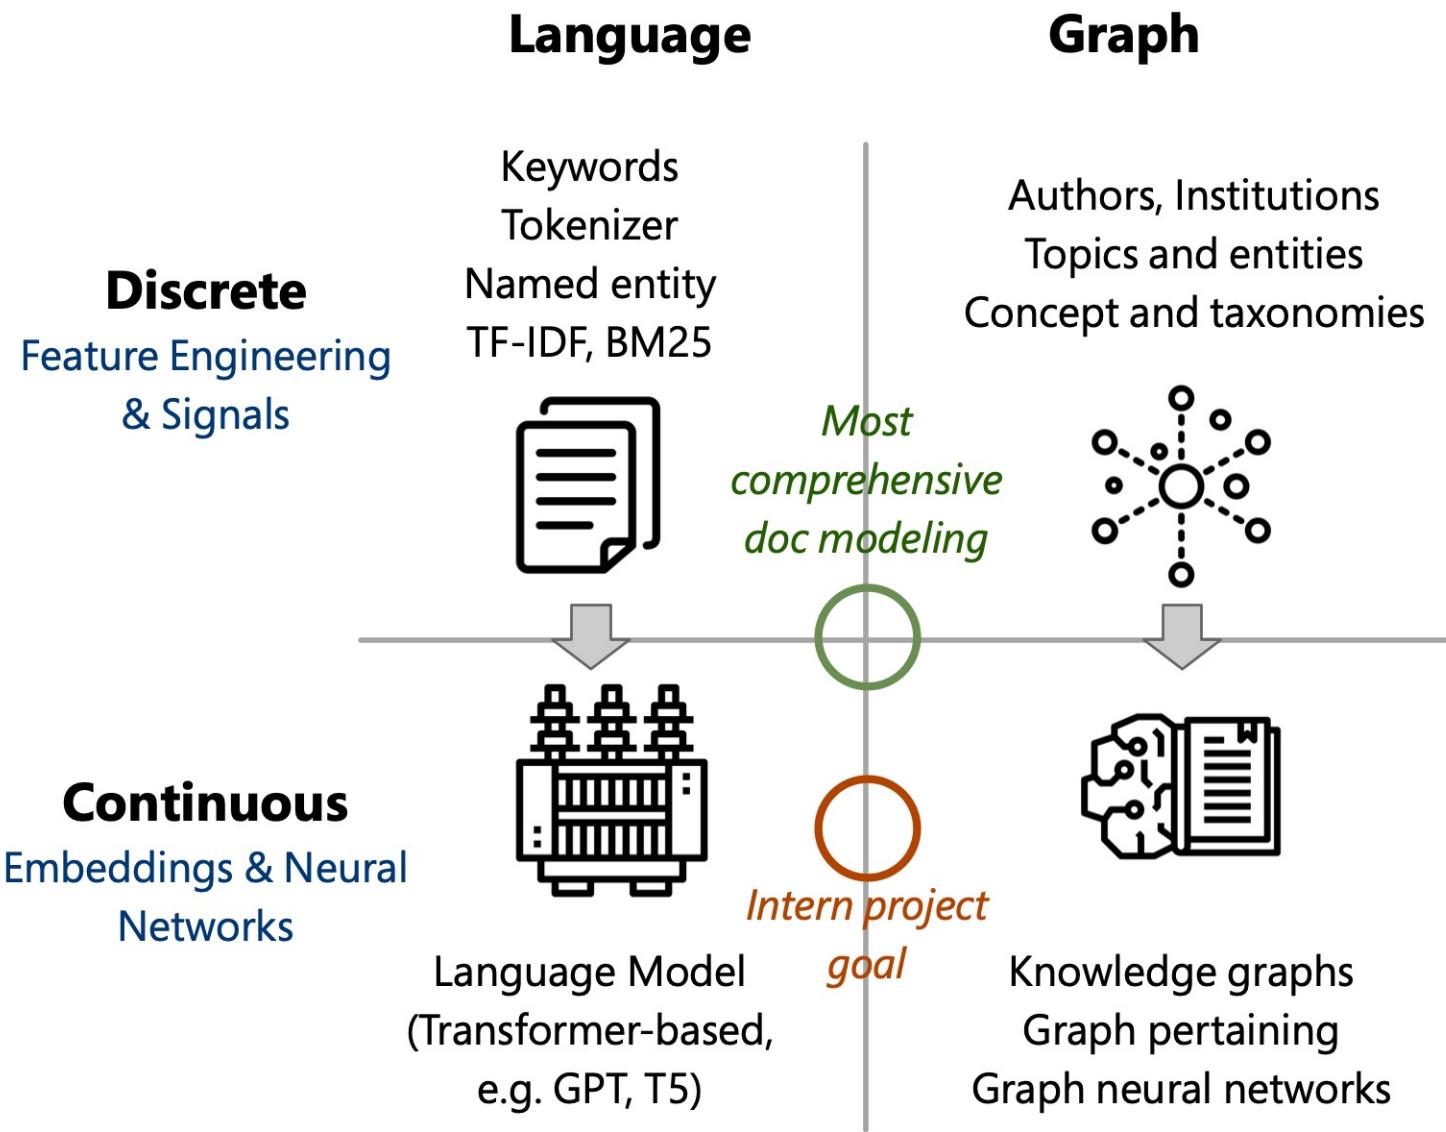

# Summary

- Knowledge graphs often have ontological information, which is important for learning and inference but sparsely investigated.
- Joint learning on the instance and ontology views improves the KG embeddings. That is, incorporating ontologies in KGs is beneficial.
- Ontology-enhanced KG modeling can be applied in a wide selection of interdisciplinary applications, such as protein-protein interaction prediction in bioinformatics and diversified product recommendation in recommender systems.
- Graph neural networks have shown as a power tool on KG as relational data and graph-related downstream tasks, such as node classification, link prediction.

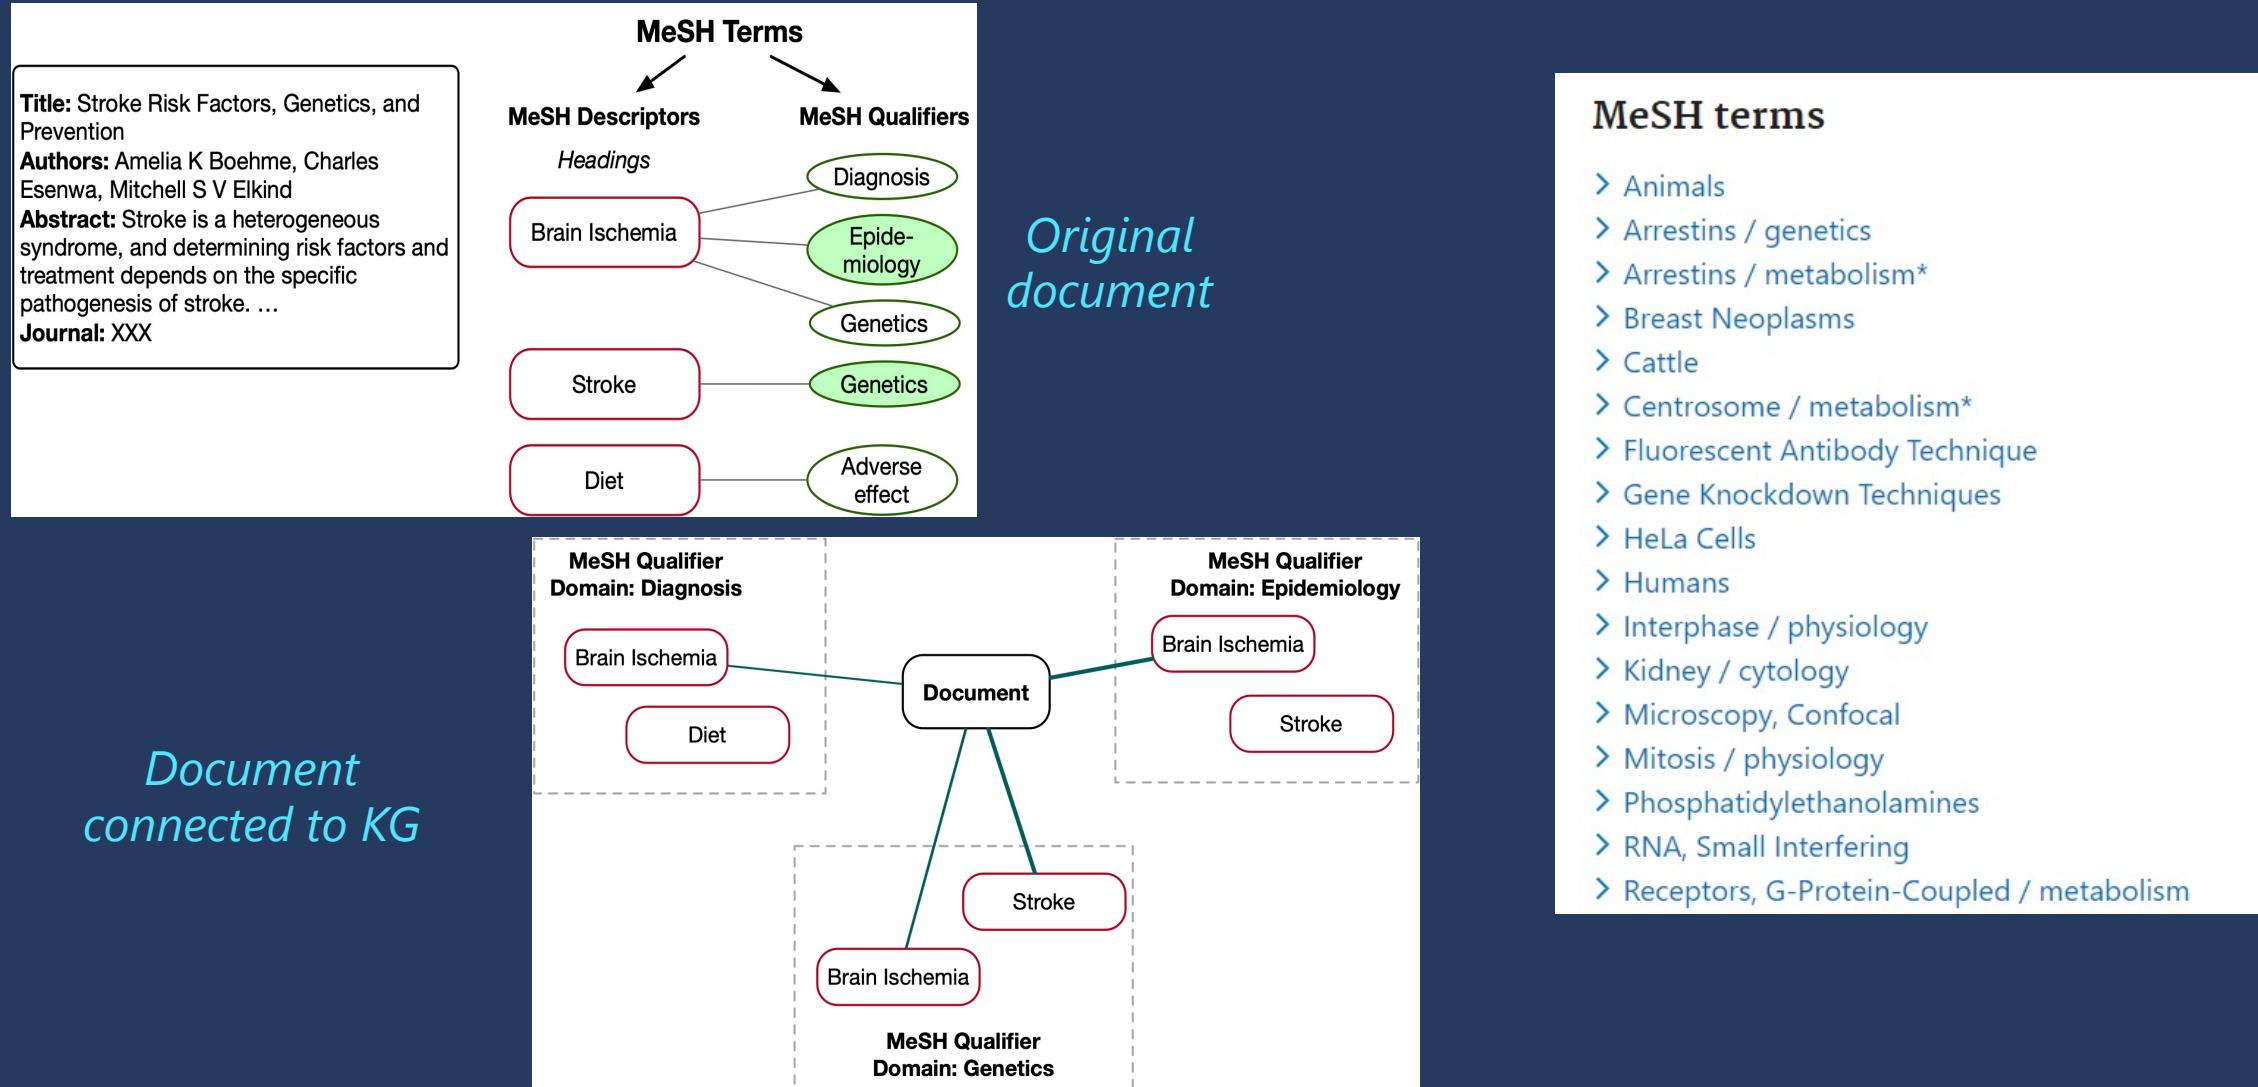

# Feature spectrum of document modeling

Knowledge mining and document intelligence

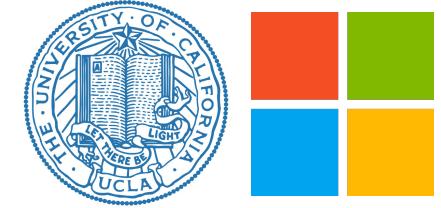

# KG-Empowered Document Representation Learning

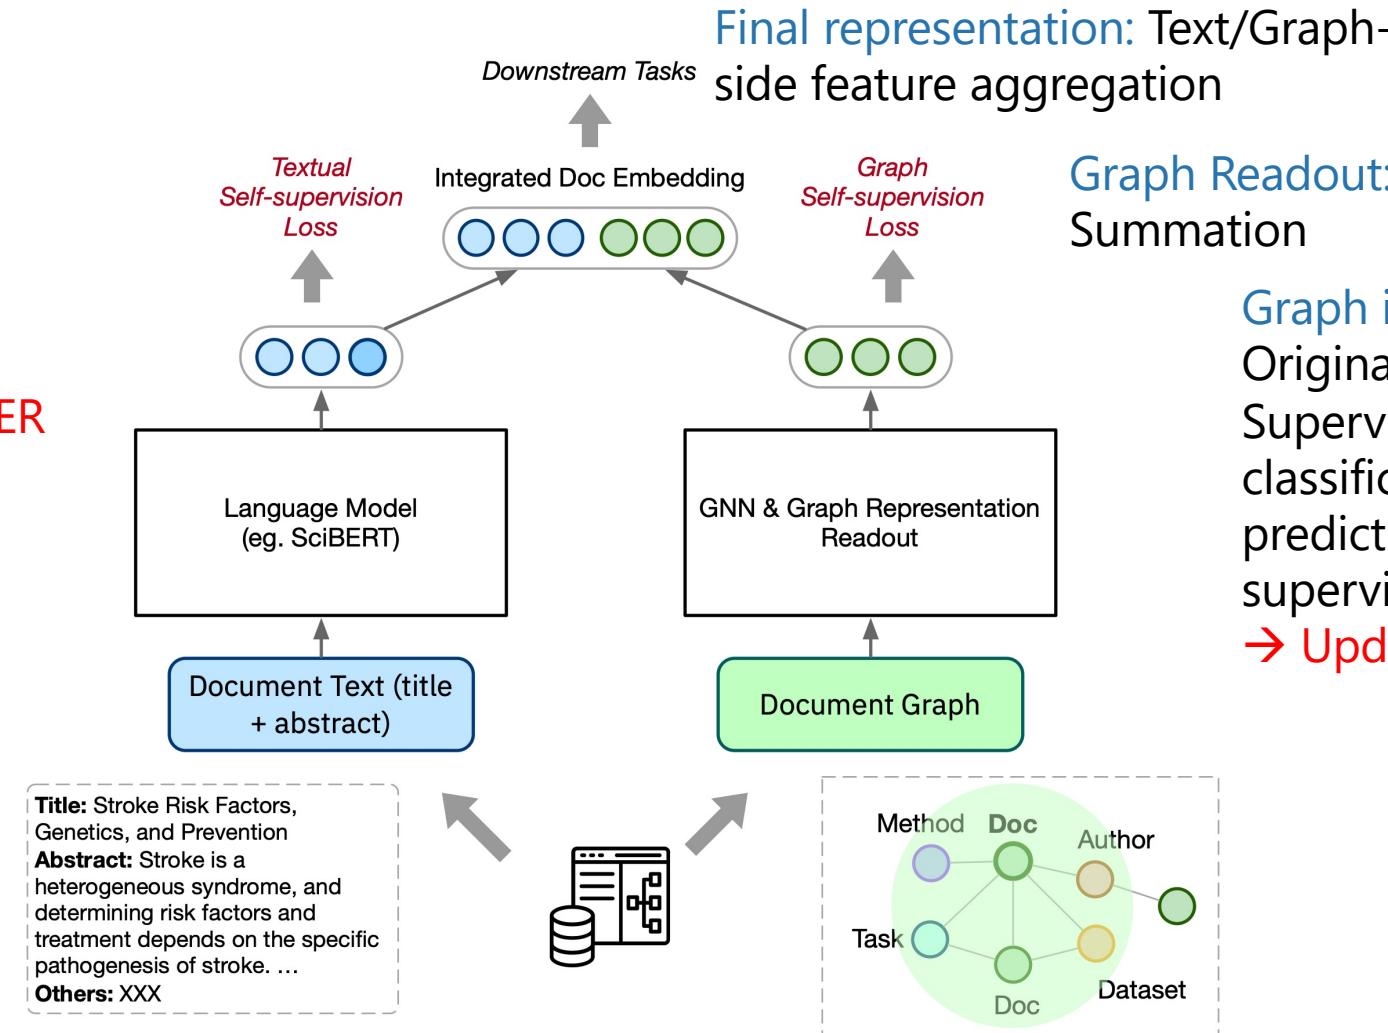

## Encoding structured knowledge in documents

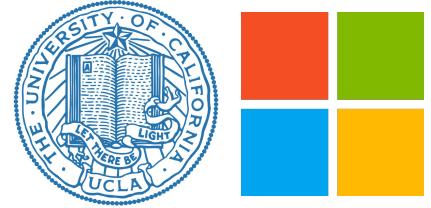

# Proposed Tech Spec (Details, initial version)

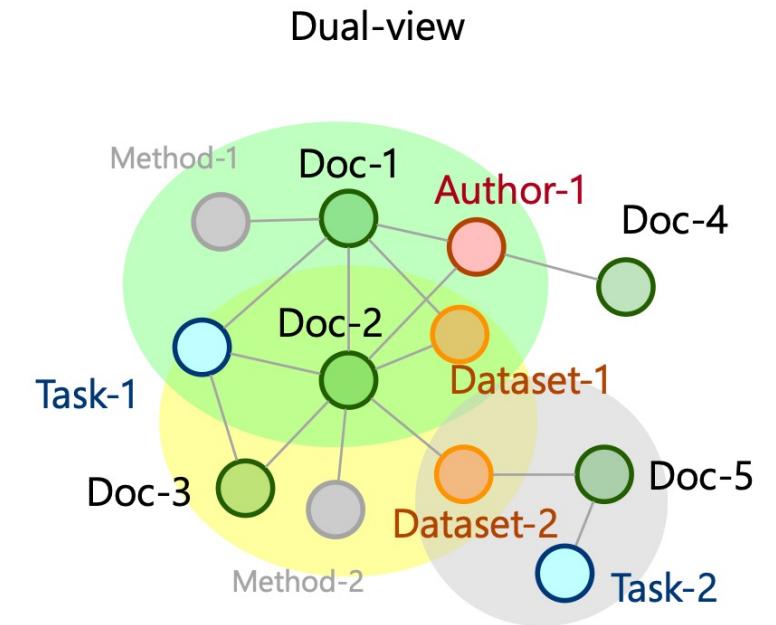

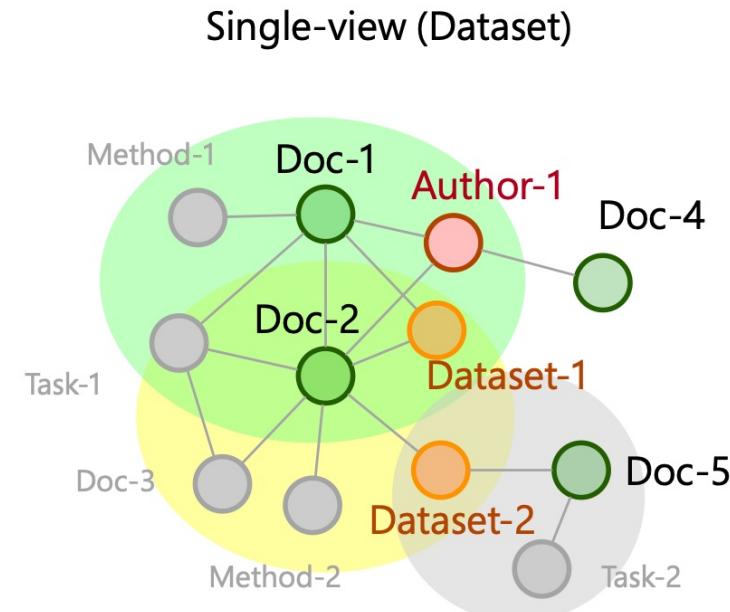

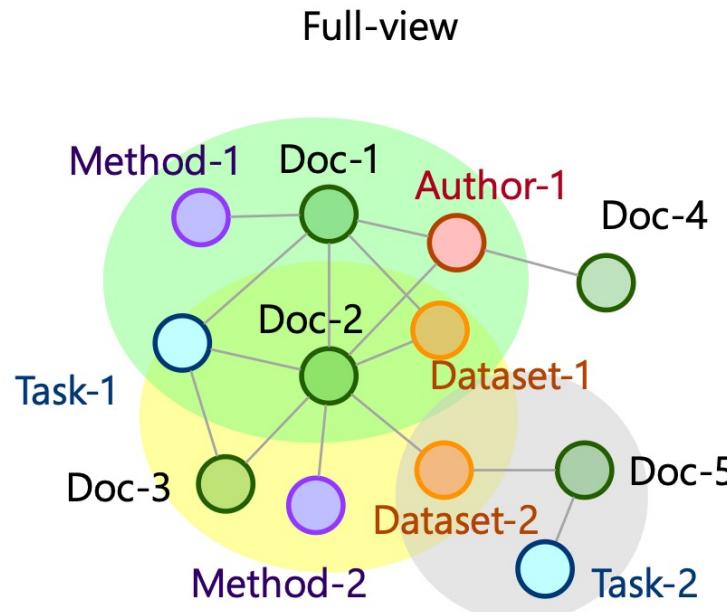

**Text-side implementation:**  
SPECTER (detached, not trained)  
→ Update: Finetune SPECTER

# Add Graph-Level Contrastive Loss

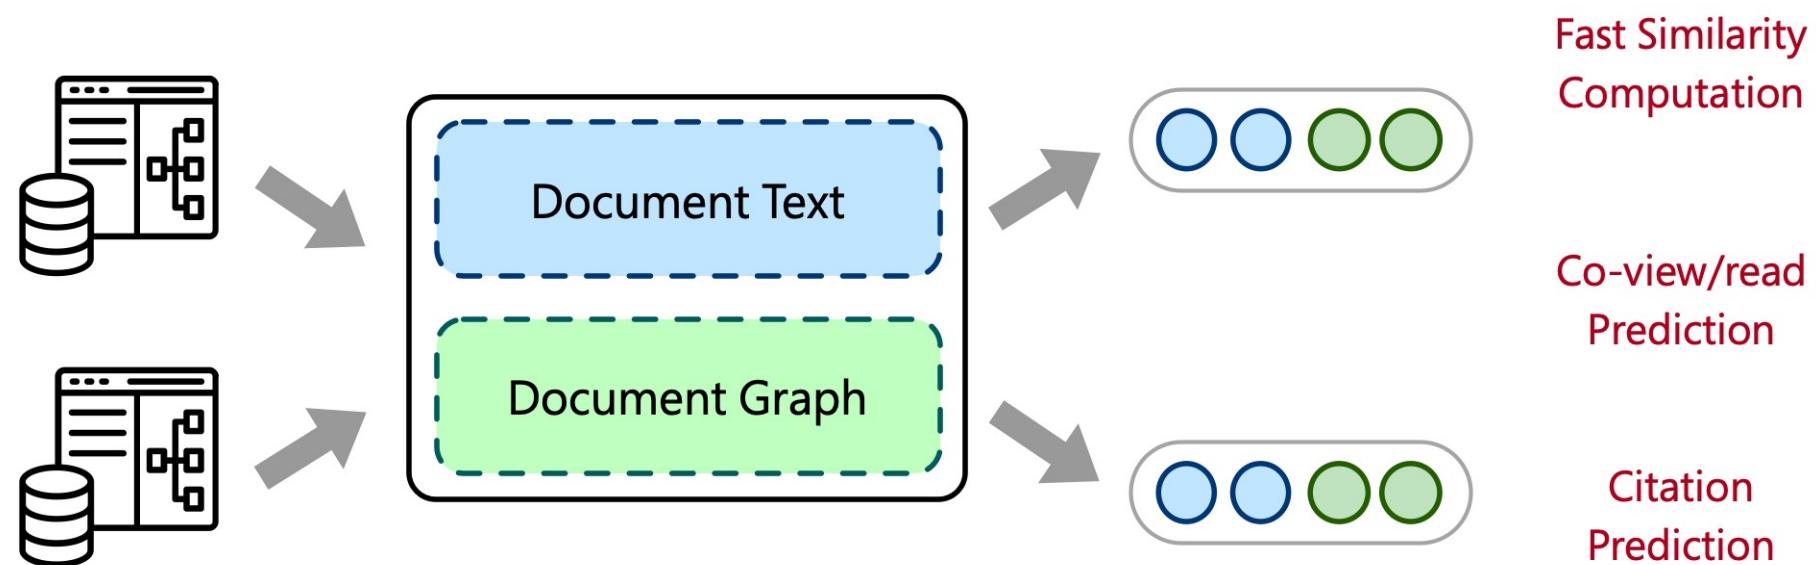

- Full-view Graph-level loss + View-selection Subgraph loss

# Supporting Doc-related Applications

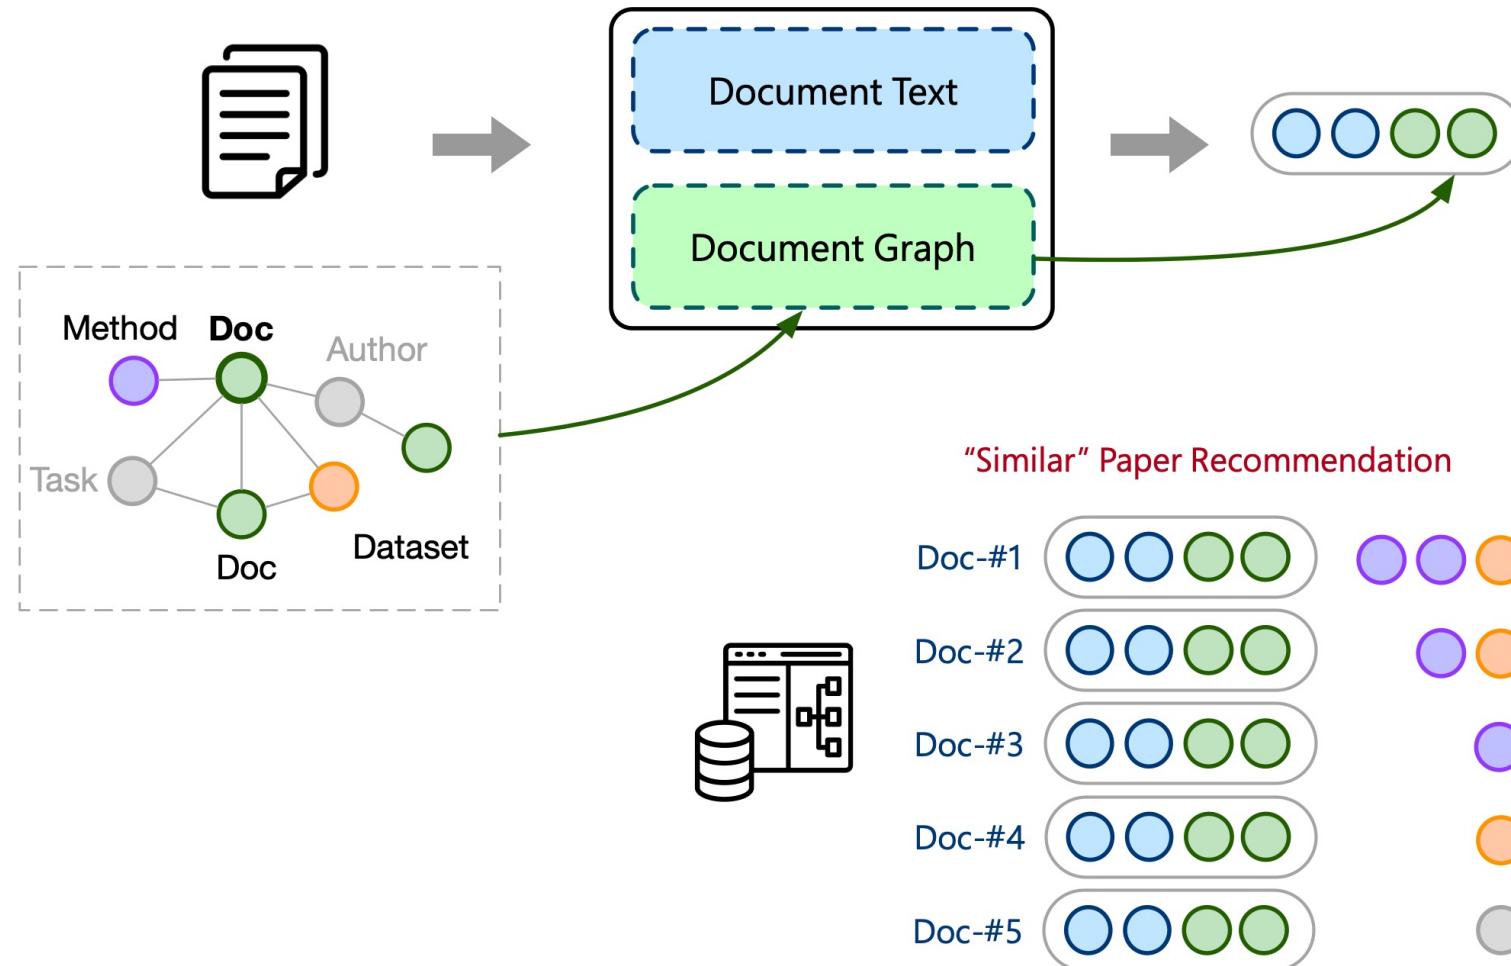

Intermediate output: Document representations → Doc-doc recommendation

Pretrained document embedding for (re)ranking, etc.

# Supporting Doc-related Applications

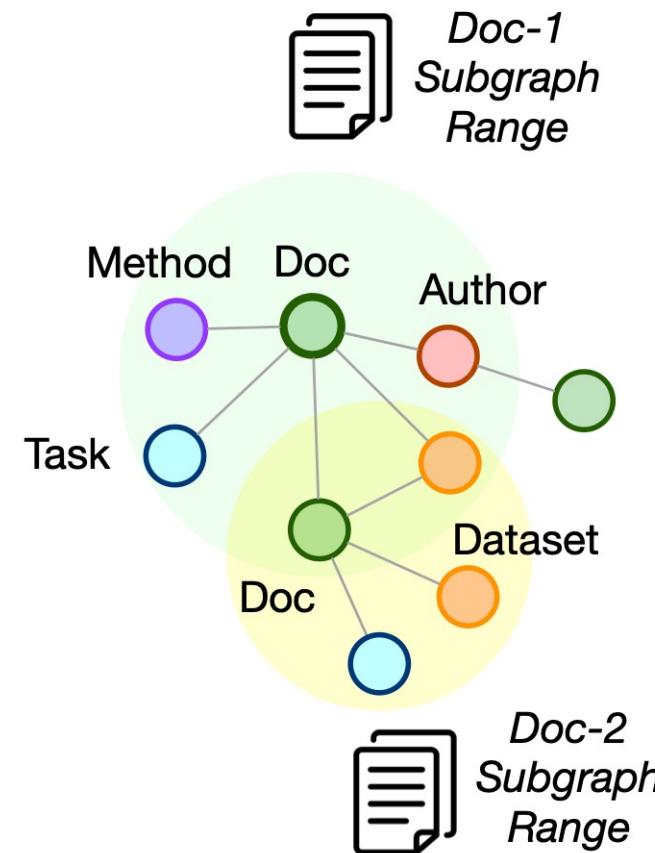

Controllable, flexible and explainable document recommendation

# Supporting Doc-related Applications

---

Potentially help complete document-level knowledge graphs

# Thank you!
